

RIGID POST GALVANIZED ANCHOR SERIES

The Rigid Post Anchor is a fixed post roof top anchor intended for permanent applications. The Rigid Post Anchor has been thoroughly tested and is compatible for installation on steel and concrete substrates (fasteners sold separately). Standard anchors (A6300 & A6301) meet the requirements for anchors rated for window cleaning. The anchor post (available in both 12" and 18" heights) functions by extending through roofing materials and is compatible with standard pipe flashing providing waterproof anchorage for years to come. The Rigid Post Anchor is composed of durable galvanized steel, and is compatible for use with appropriately rated SRLs, vertical lifelines, and shock absorbing lanyards.

Threaded top accommodates a variety of anchor points.

Key Features

- For use on Steel, Concrete and Wood Substrates (See Manual for Requirements)
- Durable Galvanized Finish
- Great for use with Retractable Lifelines, Vertical Lifelines, or Rope Grab Units
- Post Extends Past Roofing Substrate to make Attachment Point Accessible
- Round Post Works with Most Pipe Flashing Kits
