

# QUICKSTART GUIDE

1. Connect your monophonic microphone or other TS accessory to the connector with the  icon.

2. Connect any pair of headphones. The mic channel is not available on the second connector.

3. Plug Rockit into your phone's combo jack. Audio goes out through the second connector, and mic or other input comes in through the first connector. **Note:** for best results, always plug accessories into Rockit before connecting to your phone.
