LADDER BUYER'S GUIDE

TIPS AND TRICKS TO MAKE SURE YOU CHOOSE THE BEST LADDER

- Our minimum recommended load rating for general trade use of ladders is 150kg. For light trade and domestic use, ladders should be rated to minimum of 120kg. Is the ladder you are considering rated appropriately for the intended use?
- Does the ladder comply to safety standards AS/NZS1892:1996?
- Does the ladder have stainless steel rivets to stop rusting?
- The feet are the high-wear-point of a ladder. Are the feet hard-wearing? Can the manufacture supply replacement feet if required?
- What added features or optional accessories are available for this ladder? Eg. attachable handrails, tool storage, spring loaded wheels.
- Does the platform ladder have a full-surround, gated handrail option?

For longer duration use - of more than 10 minutes - consider using an Exterior Platform, Mobile Scaffold, or Scaffold Tower.
