

BOSCH

Invented for life

Certified for Safety. Certified for YOU.

“I have constantly tried to deliver only products which withstand the closest scrutiny – products which prove themselves superior in every respect.”

Robert Bosch

What is your benefit in purchasing an eBike installed with the Bosch eBike System certified to UL 2849?

- ▶ Certified products mean all applicable requirements of the relevant safety standards are met.
- ▶ The certification provides an unbiased safety assurance that our eBike systems comply with rigorous testing protocols to prevent safety hazards.
- ▶ The compliance is ensured by third party field reps conducting periodic, unannounced on-site inspections of certified products at the manufacturing locations worldwide.
- ▶ All chargers are certified to UL 1012 & CSA 107.2.

Why is there a UL safety standard for eBike systems?

- ▶ The battery, charger, drive unit and display make a complex electrical system. Therefore a standard has been developed to test for electrical and fire safety: UL 2849.
- ▶ It is important the entire eBike system is certified and not just the battery. When factoring safety in your purchasing decision ask for confirmation that the complete system is certified to UL 2849. Certification logo for our complete eBike System can be found on our battery packs.

Why do we certify our eBike System to UL 2849?

- ▶ Certification to UL 2849 is the gold standard for eBike systems. It is an involved, but voluntary process to evaluate the entire system.
- ▶ We believe safety is most important, so we develop our complete eBike system to operate seamlessly and comply with this certification.
