## HEFROTRIM INJECTION 240MG/ML 100 ML INJECTION

**For Cattle, Horses, Sheep,  
Goats, Dogs and Cats**

Antibiotic against Gram-positive and  
Gram-negative bacteria and coccidiosis

**Active ingredient:** Sulfadimidine 200 mg/ml, Trimethoprim 40 mg/ml

**Pack size:** 100 ml

**Indications for use:** Therapy of diseases caused by bacteria sensitive to sulfadimidine and trimethoprim: Infections of the respiratory tract, lungs, skin, gastrointestinal and urogenital tracts. Secondary bacterial infections during and after viral diseases, especially of the respiratory and gastrointestinal tract, wound and navel infections, infections of the claws (e.g. paronychia).

**Dosage:**  
**Horses:** 1 ml per 10-15 kg b.w. (sc, im)  
**Cattle:** 1 ml per 10-15 kg b.w. (sc, im, iv)  
**Sheep and Goats:** 1 ml per 10-15 kg b.w. (im, iv)  
**Dogs and Cats:** 0.1 - 0.2 ml per kg b.w. (sc, im, iv)

The duration of the treatment is once-a-day between 3 to 5 days, depending on the severity of the disease. Volume at the same site should not exceed 10 ml.

If after three days of treatment no signs of improvement are seen, the diagnosis and the therapy should be reconsidered.

**Storage:** Store below 30°C. Protect from light.

## METAPHOSOL 200MG/ML 100 ML SOLUTION FOR INJECTION

For Cattle, Horses, Sheep, Goats,  
Dogs and Cats

Treatment and prophylaxis of  
metabolic disorders.

**Active ingredient:** Toldimfos sodium trihydrate 200 mg/ml

- To treat post parturient paresis, post parturient hemoglobinuria, downer cow syndrome.
- To treat skeletal deformities such as rickets, stunted growth in young animals, osteomalacia in adult animals and fracture in conjunction with Calcium and Vit. D3.
- As a supportive treatment in weakness and prostration after disease, dystochia, surgery.
- Treatment and prophylaxis of tetanus and paresis due to disturbances of Calcium, Magnesium metabolism in conjunction with Calcium, magnesium infusions.
- Treatment of infertility and improvement of conception rate.

**Dosage:** For treatment of conditions resulting in acute hypophosphatemia:  
**Cattle and Horses:** 10 to 30 ml per animal IV or IM. Repeat till the clinical effect up to 10 injections.  
**Sheep and Goats:** 5 to 15 ml per animal IV or IM. Repeat till the clinical effect upto 10 injections.  
**Dogs and Cats:** 0.25 to 5 ml per animal as slow IV injection over 6 hours, stop when serum phosphorus level reaches 2 mg/dl.

For treatment of conditions associated with chronic hypophosphatemia:  
**Cattle and Horses:** 10 to 25 ml per animal IM or SC repeat till the clinical effect up to 10 injections.  
**Sheep, Goat and Calf:** 2 to 5 ml per animal IM or SC, till the clinical effect up to 10 injections.  
**Dogs and Cats:** 1 to 3 ml IM or SC every 2 days, repeat till clinical effect up to 10 injections.

**Storage:** Store below 30°C. Protect from light.

# SYNCHROMATE 0.250MG/ML 20 ML

For Cattle, Horses, Sheep  
and Goats

Cyclus synchronisation, induction of  
abortion and labour.

**Active ingredient:** ( $\pm$ )Cloprostenol 0.250 mg/g (as sodium 0.263 mg/g)

**Pack size:** 20 ml

**Indications for use:** **Cattle (cows):** For Suboestrus or non-detected oestrus, synchronisation of oestrus, induction of parturition, termination of normal pregnancy, termination of abnormal pregnancy, mummified foetus, hydrops of the foetal membranes, chronic endometritis (pyometra), ovarian luteal cysts, controlled breeding.

**Horses (mares):** For induction of luteolysis following early foetal death and resorption, termination of persistent dioestrus, termination of pseudopregnancy, causing abortion prior to the twelfth day of gestation, treatment of lactation anoestrus, establishing oestrous cycles in barren/maiden mares, as an aid to stud management.

**Sheep and Goats:** For induction of parturition in the final stages of pregnancy, oestrus induction or synchronisation during the breeding season.

**Dosage:** For IM injection. For deep IM injection in pigs, cattle, sheep, goats are also injectable by SC route

**Cattle (cows):** 2.0 ml Synchronate (equivalent to 500  $\mu$ g of ( $\pm$ )cloprostenol) / animal and treatment.

- Suboestrus or non-detected oestrus / synchronisation of oestrus / ovarian luteal cysts / controlled breeding: After the first injection, inseminate any cows showing signs of heat. Animals that do not show signs of heat should be injected 11 days after the first injection and then inseminated 72-96 hours later.
- Chronic endometritis (Pyometra): One dose, if necessary, repeat treatment after 14 days.
- Termination of normal / abnormal pregnancy: To induce parturition use single dose.

**Horses (mares):** 0.5-1.0 ml Synchronate per pony, 1-2 ml Synchronate / horses

**Sheep and Goats:** 0.5 ml Synchronate per animal

- Initiation of birth: one injection
- Oestrus induction or synchronisation during the breeding season: one injection, for oestrus synchronisation animals may be treated twice 11 days apart.

**Storage:** Store below 30°C. Protect from light.
