

PRODUCT SPECIFICATION

ASTRA

Hybrid Polyurethane/Polyvinylchloride Composite Shoe Upper Material

1.0 SCOPE:

The material defined by this standard is a polymer coated fabric of good quality and uniform composition with a solid surface. The coating is a composite based on PVC and urethane polymers. The entire product, including the components, is manufactured in the United States.

2.0 APPLICATION:

This product is designed to be used as shoe upper material for men's footwear. It is also designed to be used for belts, holsters, cap visors, and other specialty products.

3.0 PATTERN and FINISH:

The color, pattern, and finish shall match the master sample, as illustrated in sample literature.

4.0 CONSTRUCTION:

The above-mentioned composite constitutes 64% of the total product. The balance consists of polyester cotton sateen of special construction: Total Weight: 34.2 +/- 2osy
