

Green or Greenwash

Are all **water based** nail polishes created equal?

Water based nail technology is getting more attention and understanding how they compare is fundamental. Just because a nail polish claims to be water based doesn't make the entire system "safe". When comparing any **water based nail polish system**, in the areas of performance, safety, and aesthetics, the question becomes which one delivers on the promise of being a truly green alternative?

Acquarella is **water based, toxin free and truly safe**.

Feature Comparison			
Surface Shine			
Color Opacity			
Color Translucency
