

AIRCYCLER® G2-K WIRING

USING FANCONNECT™ - TWO BATHROOMS, TWO EXHAUST FANS

Two exhaust fans in two different bathrooms can be connected to the AirCycler g2-k system. The increased exhaust ventilation can be counted toward the overall ventilation requirement.

By using a standard 3-way switch in the second bath and wiring to the FanConnect™ switch, the FanConnect™ can turn on the exhaust fan in the second bath at the same time it turns on the exhaust fan in the first bath. Otherwise, the second exhaust fan will continue to function normally, turning on when a user flips the 3-way switch. Follow the below wiring diagram for installation:
