

Stencils, Masks & Patterns Selection Guide

Materials and Applications:

Sandblast Resist Mask is 15 mil self-adhesive heavy vinyl for accurate template sandblasting of concrete and stone surfaces.

Micro-Top Vinyl Mask is 8 mil self-adhesive medium vinyl, used to form channels for application of Spraycrete, GraniTite & other decorative concrete coatings to form precise labyrinth patterns on concrete. No cutting or grooving of the concrete is needed. **Micro-Top Vinyl Mask** is also used to guide application of spray-on coatings for wood, vinyl and other surfaces.

Mylar Tracing Stencils are used to outline a design onto a surface for later hand painting or staining. Precise edges for professional results. Pre-cut and ready to use out of the box.

Kraft Paper Full Size Print Patterns are used as full coverage stencils. Once secured in place, cut using a razor knife or paper slicer. Adhere to smooth surfaces using contact cement. We will print tape guidelines upon request if you prefer to use masking tape to adhere the pattern. Patterns are used as spray coating channels, or for application of paints or stains.
