

## C-SECTION RECOVERY UNDERWEAR ADDRESSES POST-SURGICAL RECOVERY WITH GRADED EDEMA + INCISION CARE

### COMPRESSION

reduces abdominal swelling, gas, fluid collection and peri-incisional edema. Graded, safe post-operative compression level.

### MEDICAL GRADE SILICONE PANEL

reduces scarring and its symptoms, supports incision area.

- Clinically supported recovery for c-section moms
- Compression plus low transverse abdominal (pfannensteil) silicone incision support panel
- Provides wound care plus peri-incisional edema control at the otherwise unsupported and gravity dependent incision area
- Clinically dictated compression to allow edema control but not adversely impact wound healing (below 30mmHg)
- Upward graded compression allows for prioritized incision support, unlike binders or shapers that focus on the abdomen and downward.
- Can be worn immediately after surgery up to 1 year from reducing post-procedural edema to scar maturation
- Machine washable, sizes S/M, L/XL and 1X/2X
- Retail price \$39.99
