

The **flyp** nebulizer is designed with you in mind.

Easy to use

It's integrated, 'all-in-one' design means there are no tubes or control units. Just fill, click, breathe.

Small and light weight

It fits in your pocket. It weighs less than a smart phone.

Fast

It takes about 7 minutes.

Quiet operation

It's virtually noiseless.

Long life

It's warranted for 3 years.

Saves you money

It's rechargeable via USB. There is no need to buy disposable batteries.

How to order the **FLYP** nebulizer

Order by phone:
844 - FLYP - NEB

flyp™

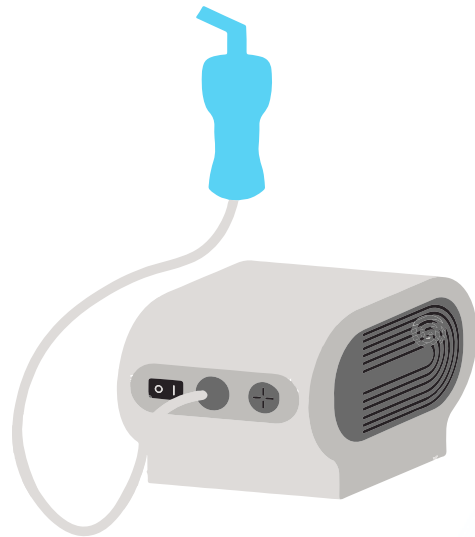

Forget conventional nebulizers

The problem with other nebulizers

Too large and heavy

Try putting one in your pocket. So-called 'portable' nebulizers aren't so portable.

Too slow

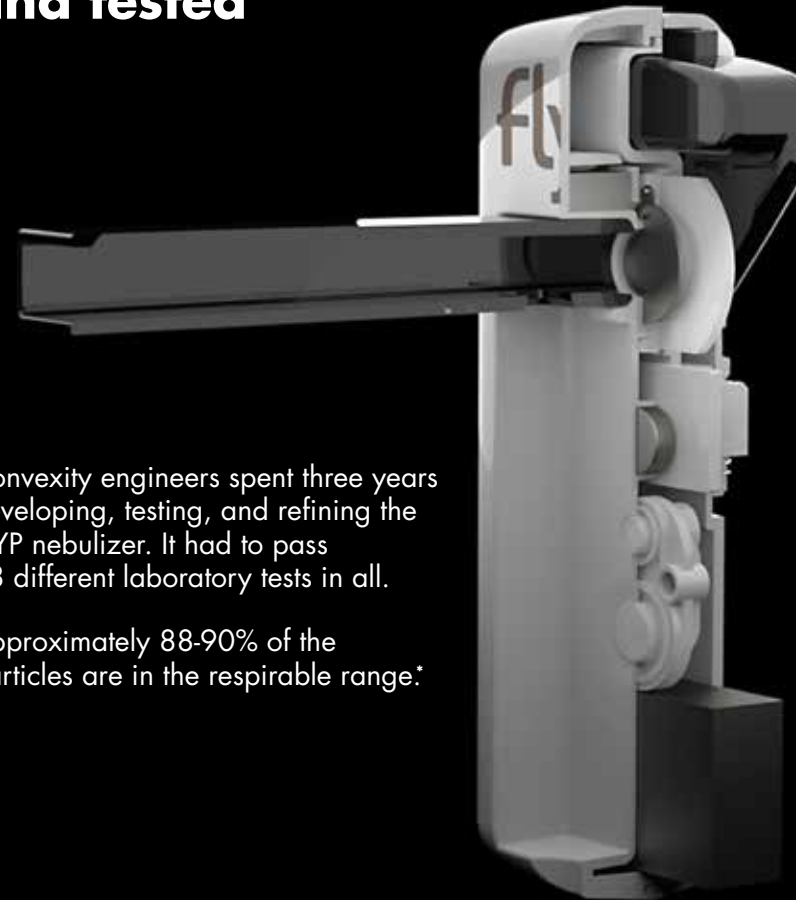

Other nebulizers take up to 15-20 minutes to dispense 3ml of medication.

Expensive to operate

Batteries typically need to be replaced every 8 days if used 3 times per day, adding \$150 or more to cost over 3 years.

Convexity engineered and tested

Convexity engineers spent three years developing, testing, and refining the FLYP nebulizer. It had to pass 18 different laboratory tests in all.

Approximately 88-90% of the particles are in the respirable range.*

*With albuterol and ipratropium bromide, respectively

HypersoniQ engineering

It starts with a precision-engineered disk with 1,000 holes so small that they are invisible to the naked eye.

The disk is made to vibrate at an ultrasonic speed that is 2,000 times faster than a hummingbird's wings. We call it our HypersoniQ technology.

As medication passes through the disk's holes, it is broken up into an aerosol that can be inhaled for delivery to your lungs.
