

D3

Stand Out From The Crowd

Our D3 range has a 3D wood grain effect written directly into the board surface, designed to achieve the most natural wood look on the market. The deep 3D embossed grains provide a natural and beautifully enhanced texture that will make your deck with a difference stand out from the crowd.

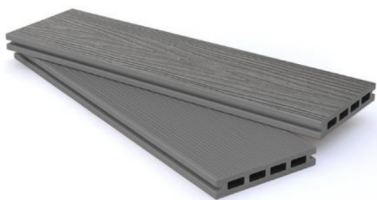

The D3 range has a 3D Textured wood grain effect embossed directly within the surface of the board. Designed to achieve the most realistic timber wood effect on the market, the deeply textured grain mimics the subtle variations, colour changes and patterns seen in natural wood and we are meticulous in ensuring that no two boards are the same. The beautiful deep texture of the deckboards will ensure your deck stands out from the crowd.

Our unrivalled co-extrusion engineering process creates a premium composite with an ageless appearance. The outstanding superiority of this product makes it suitable for all outdoor settings – from home gardens to city developments, parks, swimming pools, holiday parks and podium deck spaces.
