

# DURO360

## A Superior Board with Higher Performance

Dedicated to quality using the most advanced technology, its 360-degree cover makes it the most durable decking yet, supporting modern living and providing a timeless finish. Beautifully grained...with a unique textured design.

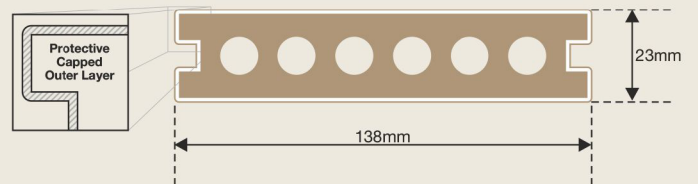

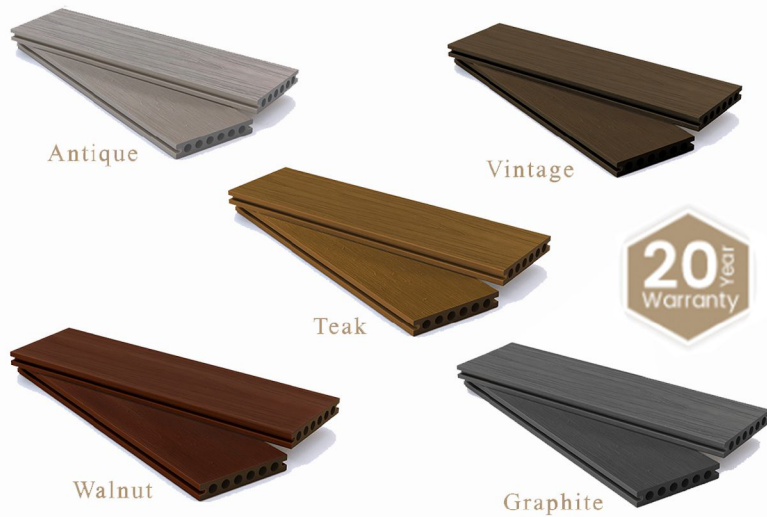

# DURO360

Duro360 decking is produced by advanced co-extrusion technique which was developed with direct cooperation with a leading university. The process is to extrude two materials at the same time and give the boards a natural layered appearance and provide more enhanced protection and performance. The outer layer tightly encases the inner layer providing 360 degree cover for the core materials to give superior design, protection and durability.

The outer layer will provide a natural appearance in a unique range of colours onto the board surface to create a powerful wood finish and the inner layer will achieve the requirements for the mechanical and physical properties for any specification you may have. Our Duro360 is a premium ethical product and is preferred for holiday parks, leisure homes, swimming pools and outdoor layouts with deck spaces to construction customers looking to expand their specification library.

It is available in four rich colours to suit all tastes, all of which feature a stunning embossed wood grain on one side and a light brush on the reverse for maximum versatility.
