ITALIAN PORCELAIN >

Porcelain has a number of great properties which make it an ideal material for paving. The main advantage being, the surface exhibits extremely low water absorption and therefore lends itself as an ideal substrate for modern exterior landscaping projects. Due to porcelain versatility it can be laid internally and externally giving a seamless contemporary finish.

GRIGIO	30	600 x 1200	21.60

Example layouts

A modern outdoor patio area featuring a wooden pergola with string lights. The patio is paved with large, square, light-colored tiles that have a speckled, granite-like finish. In the center, there is a dark wicker coffee table with a matching sofa and armchair. The furniture is accented with beige cushions and red and white striped pillows. A glass-topped table with a metal frame is also visible. The patio is decorated with several potted plants, including a tall green topiary tree and a large planter box filled with vibrant pink and purple flowers. The background shows a house with light-colored horizontal siding and large windows. The overall atmosphere is bright and inviting.

“A texture and speckle finish that matches the look of natural granite with all the benefits of Porcelain.”

General product information

Sandstone

Sandstone needs to be handled carefully when being installed to minimise staining.

All sandstone products have variations of colour and can contain small particles of ironstone within the product creating a darkening of the surface with natural weathering. GRS accept no responsibility for its occurrence.

Limestone

Indian Black limestone is a UV sensitive product. Over time you may see a lightening of the surface. GRS accept no responsibility for its occurrence.

We recommend using a non-acidic based sealer prior to installing or immediately after installing.

Porcelain

All GRS porcelain paving is manufactured to a minimum R11 slip rating, suitable for outdoor use. When installing porcelain paving, we recommend using a slurry primer on the underside of each paver, which provides a bond between the paver and the wet bed underneath. Use of a slurry primer is critical to the overall performance of GRS porcelain.

We recommended the newly laid area be thoroughly cleaned/washed to help remove dirt and any grout residue. We also recommend periodic cleaning with a porcelain cleaner to help keep GRS porcelain looking its best.

Efflorescence

Efflorescence is a natural chemical reaction between calcium hydroxide and carbon dioxide resulting in calcium carbonate crystal. Efflorescence can appear on

all paving products and can happen at any time and will generally disappear over a period of time.

Efflorescence does not cause any detrimental impact to the performance of the paver and GRS accept no responsibility for its occurrence.

Maintenance

Paving materials require periodic cleaning and regular sweeping to maintain their appearance. Sweeping also helps prevent the build-up of dirt and debris.

Cleaning agents are widely available. Care should be taken when buying cleaning agents, as some cleaning products contain acid, which can permanently affect the appearance of the paver.

Weathering

Site conditions and weathering can differ and can occasionally cause variations in colour to appear. Natural stone can develop markings and other deposits as mineral oxidises.

All paving products can develop algae and organic growth under environmental conditions and may require cleaning.

GRS accepts no responsibility for any of the above conditions.

Colour/size Variations

Paving colours shown in this brochure are as accurate as photographic and printing processes will allow. We recommend choosing a colour from a physical sample. All natural goods supplied by the Seller are subject to natural and geological variations in markings, colour, texture, cracks and vents, which are beyond the control of the Seller.

When purchasing materials for larger quantities, we recommend that they all come from the same batch and are mixed between a minimum of 3 packs.

All dimensions given are nominal and subject to manufacturing tolerances.

Installation

The Seller recommends that the Purchaser employ only the services of a qualified and experienced Tiler in the storage, handling, laying and sealing of all-natural stone and porcelain floor tiles. The Seller also recommends that the Purchaser use a good quality flexible adhesive and grout. Natural stone tiles must be sealed using a good quality and reputable branded sealant.

Health and Safety

Installing paving can be dangerous if appropriate health and safety measures are not taken.

Paving products are heavy. Ensure that you take care when handling any of the products to limit the risk of personal injury and/or damage to the product.

Goods

All paving should be inspected upon delivery and any concerns raised with GRS prior to installation. Once the goods have been installed, they cannot be returned under any circumstances.

Please refer to GRS Building Products Limited Terms and Conditions of Sale for further detail.
