

***Ionic Protect**[®] is the most valuable invention since pure new wool was used as insulation. Biocide-free and tested according to EAD / CUAP and Ionic Protect[®], is protected by trademark law.*

***IONIC PROTECT**[®] is a slight alteration of the molecular protein structure of the wool fibre through a plasma-ion treatment. This specific process is unique as it permanently prevents the wool from being a nutritional source for wool parasites.*

This unique treatment method is only applied to our range and gives the sheep's wool all the properties that are necessary for its permanent function as an insulating material. The functionality has been tested and confirmed in the laboratory (EAD / CUAP test).
