

Eaves Closer

The Eaves Closer is a simple and effective way of preventing birds and vermin from entering the counter batten cavity. A simple to install one section eaves perimeter detail for counter batted roof systems.

Installation

The Eaves Closers are only required when counterbattens are located above the roofing underlay. They are fixed using corrosion resistant nails directly into the bottom edge of the counter batten at the eaves or into a continuous edge batten along the complete perimeter length of the eaves.

KLOBER

Product features & benefits

- Prevents the entry of birds and vermin into the counter batten cavity
- Allows air movement into the counterbatten cavity
- Lightweight and durable

Area of application

Suitable for:

- All types of roof tile and slates

Material

UPVC

Colour

Black
