

PRODUCT DATASHEET

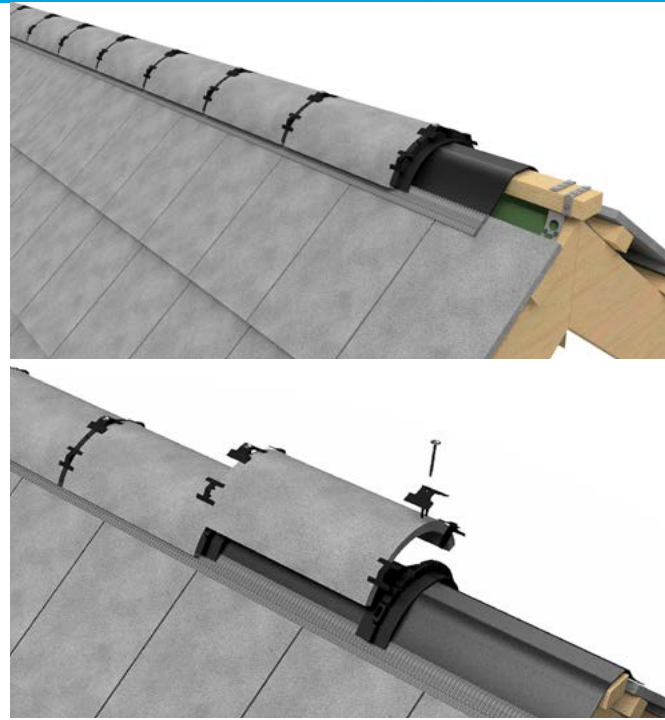

Dry-Fix Ridge System

This fully compliant Dry-Fix Ridge System can be installed in all weathers. Developed for faster and safer ridge tile installation and simple to install, it creates less mess and has none of the problems that come with mortar.

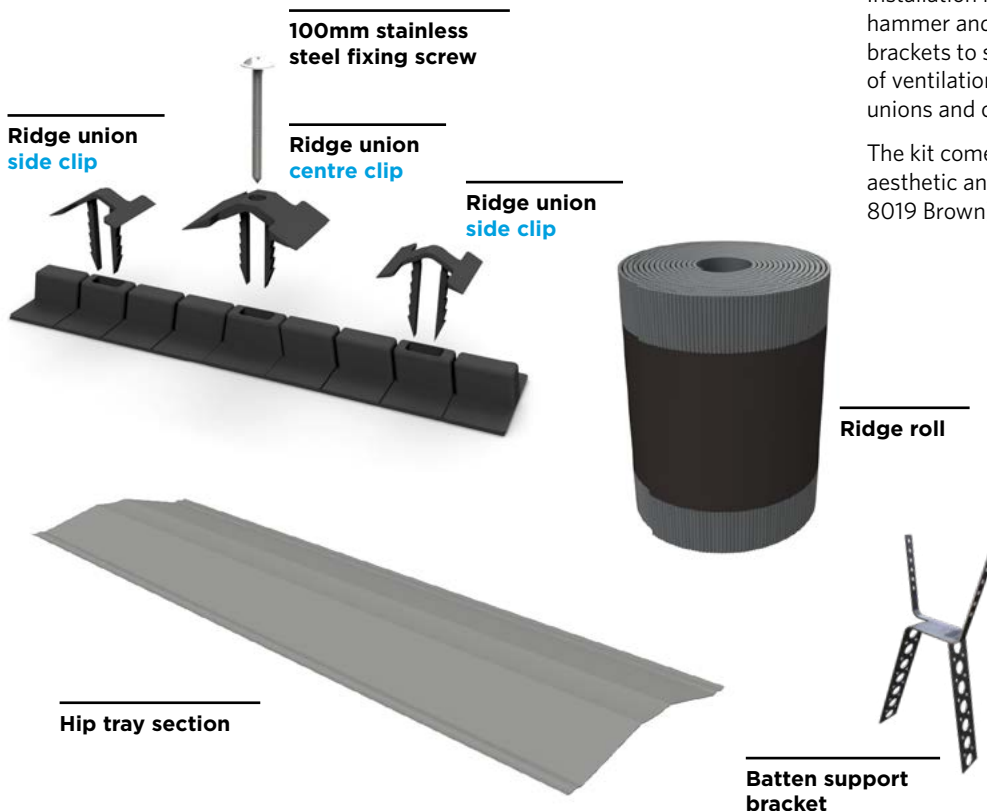

More extreme weather has led to a change in roofing advice. The latest BS5534 & BS8612 standards recommend dry fixing for ridge tiles. It's safer for building owners, more dependable for roofers, and means no more customer calls to fix common mortar problems.

KEY FEATURES

- Faster and easier to achieve perfectly level, secure ridge tiles
- Suitable for ventilated and unventilated roofspaces
- 2 colour choices depending on roof aesthetic and tile colours (RAL 7021 Anthracite & RAL 8019 Brown)
- Complete compliance with NHBC, BS5534 & BS8612 standards
- In stock for next-day delivery from stock throughout the UK
- 1200mm Hip trays are available

COMPONENTS

SUPPLY AND INSTALLATION

Installation is simple and the only tools needed are a hammer and a screwdriver. Each kit contains easy-fix brackets to support the ridge batten, a 6 -metre length of ventilation roll to lay over the ridge batten, and joint unions and clips to join the ridge tiles.

The kit comes in two colour choices depending on roof aesthetic and tile colours (RAL 7021 Anthracite & RAL 8019 Brown).
