

# Anir Mouse Wireless

A vertical mouse for the most natural posture

 BAKKER ELKHUIZEN

*Work Smart - Feel Good*

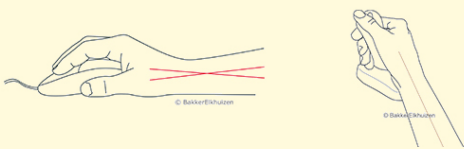

## Use your mouse hand in the most natural posture

The Anir Mouse is a vertical mouse. It is sort of like a joystick. Its shape is easier on your wrist and fingers.

When using a traditional mouse your wrist and hands bend more, and this can cause physical complaints. With this mouse you hold your hand and wrist in a natural position.

The handshake position of vertical mice keeps the wrist from bending as much to the side while the forearm also turns inward to a lesser degree (Schmid, et al., 2015). This means that muscle activity in the forearm is less than it would be when using a conventional mouse (Quemelo & Vieira, 2013).

**Ergonomic:** the Anir Mouse ensures a good wrist position and low muscle tension in your fingers and forearms.

**Reduces muscle strain:** keeping your arms and shoulders in a more relaxed position.

**Smart:** special button for document scrolling.

**Wireless version:** available in both Large and Medium/Small.

**Connection:** USB and P/2.
