

## User manual

# Reuss SW-01 'Wine and Roses' Steve Wynn signature pedal

Dual overdrive/distortion designed in collaboration with Steve Wynn of The Dream Syndicate, based on the Reuss 'Germanium Dirt' and 'Old Black Shoe' models. The first is a pure germanium distortion circuit (rich, organic, fuzzy, more 'hair') and the latter features a hybrid silicon/germanium clipping arrangement (more headroom, louder, punchier). Both circuits are powered by a vintage new old stock LM308N opamp and both features an extended low-end response

### Controls (right to left, from input to output)

- 'drive' (green) is the distortion control of the germanium distortion circuit. Turn it clockwise for an increasing amount of distortion
- 'tone' (green) is the tone control of the germanium distortion circuit. Turning it clockwise will bleed off more high-end
- 'level' (green) is the level control of the germanium distortion circuit. Turning it clockwise increases the output level
- 'drive' (yellow) is the distortion control of the hybrid distortion circuit. Turn it clockwise for an increasing amount of distortion
- 'tone' (yellow) is the tone control of the hybrid distortion circuit. Turning it clockwise will bleed off more high-end
- 'level' (yellow) is the level control of the hybrid distortion circuit. Turning it clockwise increases the output level

### Switches

- 'roses' footswitch turns the germanium distortion effect on and off, indicated by the blue LED
- 'wine' footswitch turns the hybrid distortion effect on and off, indicated by the green LED

### Connectors

- 'in' is the input of the pedal. Connect your instrument here. 'Wine and Roses' is great with both guitar and bass.
- 'out' is the output
- The 9V DC connector is for a standard 'Boss-type' guitar pedal 'negative centre' power supply. ONLY use this type. Reversing the polarity can damage the pedal. The pedal can also run on a 9V battery (not included)

*Please note: The pedal is drawing power from the battery, when there is a jack in the input connector. Always remove the input jack when the pedal is not in use, if you are running it with a battery*

### Features and Specifications

- Dual overdrive/distortion pedal with expanded low-end response and a rich, complex distortion texture
- Two vintage new old stock (n.o.s.) LM308N ICs and six vintage n.o.s. germanium diodes (rare, expensive parts)
- 100% handmade in the European Union

- True bypass switching
- Silk screen printed aluminium enclosure in a pearl white pearl powder coat finish
- High quality Neutrik jacks, wired by hand
- Mammoth Electronics 'pro' upgrade footswitch (good for at least 15000 stomps)
- 24 months warranty against manufacturing faults
- Powered by a 9V battery (not included) or a standard 'Boss-type' guitar pedal power supply

### Battery access

Remove the four screws at the bottom side of the pedal with a philips head screwdriver to remove the bottom plate and gain access to the battery

### Warranty

All Reuss pedals comes with a limited 24 months warranty against manufacturing faults  
The warranty is not covering normal wear and tear or abuse
