The Lawson
DIGI-DRY BOX

High Output HVAC Blower

DTG Color Brilliance You Expect

The Lawson Digi-Dry Box is a specialized dryer designed to properly cure water-base digital ink systems, including DTG ink. It is compatible with all Direct-to-Garment printers and ink applications. Items cured in Lawson's Digi-Dry Box make DTG prints feel more like a traditional screen print than when cured with a heat press. While a heat press smashes and dulls the color on DTG prints, Lawson's Digi-Dry Box maintains the color brilliance you expect.

The Digi-Dry Box combines powerful Quartz infrared heaters with a powerful air circulation system that removes moisture out of the garment while curing the ink. Cure times typically range from 1-3 minutes, depending on ink deposit.

An automatic timer controls the curing cycle. To save energy, the Quartz lamps turn on and off automatically.

STANDARD FEATURES

- Quartz/I.R. Heat + Vacuumized Jet-Air
- Instant On/Off Cycles
- Digital Controls
- Est. Cure area: 18" x 24"
- Adjustable Curing/Timing Cycles
- Sliding Cure Bed/Surface
- Floor Legs
- Fully Insulated
- Lawson's "Cool-Touch" Sides
- Shipped Fully Assembled
- Custom Sizes Available
- 1-Year Parts Warranty
- 220 volts; 1-Phase Wiring

LAWSON'S DIGI-DRY BOX PROVIDES:

- ✓ **Simple & Easy to Use:** The Lawson Digi-Dry Box is a direct-to-garment stationary/digital dryer for use with all digital water-base ink systems. It is easier and faster to load than a heat transfer press – and easier to operate – just press a button on the easy-to-use control panel to initiate the curing cycle. No “gorilla-strength” required to mash down a heat press or air compressor required. When complete, the Digi-Dry Box turns itself off to save energy. You can also rotate the boom-style control box where you want so it's always easy to see.
- ✓ **Best Cure & Best Garment Feel Possible:** Quartz Infrared and Vacuumized Jet-Air combine to pull the moisture through and out of the garment while curing the ink to achieve the best cure possible for the widest variety of DTG printed items. Unlike a heat press that mashes the print, making it stiff and brittle, the Digi-Dry Box produces a DTG print that feels more like a screen print and retains the color vibrancy.
- ✓ **Energy Savings:** Because of Lawson's unique energy-saving design, when the Digi-Dry Box is not curing, it costs you nothing. Heat transfer presses take 10 minutes to warm up, need “recovery-time” between pressings, and stay on all day. This costs you lots of money. The Lawson Digi-Dry Box only uses energy when curing. Estimates show that most users save 30% - 40% on their energy bill with the Digi-Dry Box. The Lawson Digi-Dry Box will pay for itself in energy-savings alone in two years.
- ✓ **Great Warranty:** Dry with confidence, knowing that your Lawson Digi-Dry Box is backed by the best parts warranty available.
