Benefits

Supports microcirculation

Ginkgo Biloba extract is shown to significantly increase microcirculation while also improving free radical scavenging capacity. It also improves mechanisms that may help reduce the risk of atherosclerosis and is therefore highly recommended for those with impaired microcirculation¹.

Black ginger extract has been found to increase physical fitness performance by activating AMP-activated protein kinase, and boost muscular endurance by improving inflammation and energy metabolism.²

Yohimbine administration in healthy males is shown to elevate blood epinephrine and norepinephrine, as well as increasing heart rate, systolic blood pressure, alertness, and localized blood flow, supporting overall energy and circulation.³

Supports healthy hormonal balance

Eurycoma Longifolia is demonstrated to boost libido and energy levels while also improving stress resilience, restoring cortisol/testosterone levels, and enhancing both sports performance. Laboratory evidence shows that Eurycoma peptides stimulate the release of free testosterone from its binding proteins, improving sex drive, balanced hormonal profiles, and enhanced physical function.⁴

Maca assisted in balancing hormones (FSH, E2, PG and ACTH) and alleviating symptoms associated with perimenopause, including hot flashes, night sweats, interrupted sleep, nervousness, depression and heart palpitations.⁵

Improves libido

Turnera diffusa has important sexual benefits due to its participation in the nitric oxide pathway. Turnera's anxiolytic-like effect also contributes to improving sexual performance.⁶

Known for its effects on vitality and virility, Anacyclus Pyrethrum was shown to have marked influence on sexual organ function and behavior of male rats. Unlike testosterone, these effects continued after treatment lapsed.⁷

Eurycoma Longifolia (aka tongkat ali) restores normal testosterone levels by increasing the release rate of "free" testosterone from its binding hormone, sex-hormone-binding-globulin. This makes Eurycoma particularly beneficial for individuals with sub-normal testosterone levels.⁸

Myristica fragrans extract possesses aphrodisiac activity, increasing both libido and potency, which might be attributed to its nervous stimulating property; it is indicated for use in the management of male sexual disorders.⁹

Supports sexual function

Korean Red Ginseng (Panax ginseng) has been shown in numerous clinical trials to reduce erectile dysfunction, as well as markedly improving maintenance of erection and overall sexual performance. Ginsenoside Rg1 is the major active constituent in Panax ginseng and responsible for the increase of serum testosterone levels and improvement of sexual function.

Horny goat weed was shown to improve penile function after nerve injury as well as increasing penile neuronal nitric oxide synthase (nNOS) and smooth muscle content. Researchers suggest that it may be beneficial for human erectile problems and for treating nerve injuries.¹⁰

Animal studies indicate that Asparagus racemosa is an aphrodisiac herb that is effective in treating sexual dysfunction in males.¹¹ Pueraria Tuberosa extract also possesses androgenic effects, helping to significantly increase sexual behavior and hormonal balance.¹²

Supports physical function and overall health

Acacia Arabica has been shown in various studies to improve lipid profiles, renal profiles, gingival scores, biochemical parameters, blood pressure, inflammatory markers, and adiposity.¹³ Numerous in vitro investigations show Panax ginseng's cardiovascular benefits as an antioxidant and in supporting vasomotor function, improving lipid profiles, reducing platelet adhesion, influencing ion channels, and assisting with autonomic neurotransmitter release.¹⁴

Chlorophytum borivilianum and Velvet bean results in an increase in circulating growth hormone (GH) in exercise-trained men, which can lead to increases in protein synthesis, lipolysis, collagen synthesis, cartilage growth, and enhanced immune cell function.¹⁵

Red reishi contains a wide variety of bioactive components that provide anti-hypertensive, hypocholesterolemic, hepatoprotective and anti-histaminic effects.¹⁶

Supports healthy mood

Lion's mane contains neurotrophic compounds and can be used as an alternative treatment for depression, with evidence that it can significantly reduce depression and anxiety, and improve sleep disorders.¹⁷

www.aliveinnovations.com

Crocus sativus and its constituents increase glutamate and dopamine levels in the brain and interact with the opioid system, making it potentially useful in treating mild to moderate depression.¹⁸

Cordyceps sinensis is an antioxidant that also offers antidepressant effects by regulating the CREB binding protein.¹⁹

Eurycoma longifolia extract improves stress hormone profile and certain mood state parameters, making it effective in managing chronic stress.²⁰

Dosage

Adults: Take one capsule 2 times daily or as directed by a healthcare professional.

Safety and side effects

ENHANCEx® has an excellent safety rating, with no reported interactions from the supplement.

ENHANCEx® is not intended to replace any medication or procedures used to treat cancer, viral infections, or illnesses. Do not discontinue treatment or cancer medications without a doctor's permission.

Women who are pregnant, nursing, or any person who is immune-compromised should consult their physician before using this product. Certain medications may interact with individual ingredients – talk to your doctor if you take any medications.
