REVOLVER: HOW IT WORKS

LOCKING RAILS

UNRIVALED SECURITY!

Both *Revolvers* come equipped with 3/4" Patented Rotational Locking Rails that lock the cover securely the entire length of the truck bed when latched. The 3/4" locking rail or "tooth" rotates into composite locking blocks inserted into each aluminum slat. The cover secures automatically when the spring loaded locking levers are engaged as the roll top is closed. Now the locking rail and blocks are **2X** larger, providing extreme security, easier installation and superior off-highway performance. Heavy-duty locking levers are now **3X** thicker with reinforced gussets for added strength and are engineered to lock with no adjustment necessary.
