Get Creative, but Take Care of your Crystal Baby

Test the Fit: Some Crystal Points are thinner at the Ends

Width: Make sure the Width of your Crystal meets the requirements so it won't slip through the Mesh Carrier

Handle with Care: Crystals are soft on the Mohs Hardness Scale.* The Mesh is a holder, not a 100% protective shield.

This is not a One-Size Fits All solution, so make sure your crystal is a good fit.

Crystal Usage: Be careful with the Tips of you Crystal. Avoid Active Usage. Ex: Practicing Sports.

Necklace Usage: The Rondelles should easily Slide and Glide. Although all the little rings that connect the bars are closed by laser, it is still a delicate piece of jewelry. If you have any challenges or something doesn't feel right, email us at **info@heybabe.la**, and we will be happy to assist and fix the problem.

General Guide

Types of Crystals You Can Wear

TOWERS /

VOGEL

IRREGULAR SHAPES

DOUBLE TERMINATED

PILLAR / ELONGATED

TUMBLED

Of course you can fit more than those basic shapes, if you get creative. You can even fit smaller crystals that do not completely fill the carrier. We have seen pictures on our @heybabe.la Instagram by customers and they looked amazing! But use Discernment and make sure your Crystal Baby is safe in there while following the basic recommendations above.

^{*} The Mohs Hardness Scale is how stones are measured in Durability and Hardness. 10 being the hardest, like a Diamond.

Crystals are in average between 7 to 4 on the Mohs Hardness Scale. That means they may be delicate. So be careful with your piece when dangling and handling.
