

## TRIFOGLIO NANO - *Trifolium repens* Variety: MICROCLOVER

### A THOUGH, ATTRACTIVE, GREEN SWARD:

Microclover has minute leaves and a very low height, it remains below the normal cutting height of a lawn grass, mainly due to the microstructure of its stolons.

These characteristics make it suitable for intercropping traditional turf, to which ensures sufficient supply of nitrogen to reduce the usual nitrogen fertilization. Turfs that contain only a minute percentage of microclover require less maintenance because they are very dense and new weeds find it hard to establish.

### FRIEND OF ENVIRONMENT WITH GREAT BENEFITS:

- ✓ Increased wear tolerance = MORE LIFE
- ✓ Improved visual merit = LESS MAINTENANCE
- ✓ Increased sward density = LESS WEEDS
- ✓ Improved drought tolerance = LESS WATERING
- ✓ Improved wet and shade tolerance = LESS AERATIONS
- ✓ Less fertiliser require = MORE RESPECT FOR THE ENVIRONMENT AND LESS COSTS
