TOURBILLON

LIMITED EDITION

The background of the image is a dark, starry sky filled with numerous small, bright stars. Overlaid on this is a faint, light-colored constellation diagram, likely representing the constellation Orion, which is associated with the star Sirius. The diagram consists of various geometric shapes and lines representing stars and their connections. In the upper right quadrant, there is a white, rounded rectangular frame containing the text 'SIRIUS' and 'TOURBILLON' below it. The overall aesthetic is a blend of astronomy and horology.

SIRIUS

TOURBILLON

The tourbillon complication, as an addition to the mechanics of a watch escapement, was first developed and patented by Abraham Louis Breguet in 1795.

It was designed to ingeniously counter the effects of gravity on the accuracy of a mechanical timepiece.

By continuously rotating the entire balance wheel at a gradual revolution, the tourbillon averages out and negates minor variances in accuracy.

The name tourbillon comes from the French word for whirlwind or hurricane. Over the centuries, the tourbillon has represented the pinnacle of haute-horlogerie and the high art of watchmaking. Visually, as well as technically, the tourbillon is a moving dynamic function piece of wearable art.

Each tourbillon is individually handcrafted by a select, small group of master horologists, capable of producing a set number of these incredible machines yearly. Blending a new age, futuristic design with the intricate mechanics speaks to the heart of avant-garde watchmaking and the spirit and ethos of Nubeo.

TOURBILLON WATCHES

The enclosed tourbillon timepiece represents the very highest disciplines of watchmaking.

It remains one of the main horological complications that bears the mark of the most talented master watchmakers.

It consists of a mechanism designed to improve watch precision by compensating for the interference due to the Earth's gravity.

The balance and escapement are in a cage driven around on its own axis, which completes one rotation per minute.

Beyond its technical function the tourbillon provides visual appeal through the motion of the rotating cage, its design aesthetic and the beauty of its escapement.

Our master watchmakers at NUBEO have paid great attention to the assembly and adjustment of your watch. Its precision is subject to the influence of the Earth's attraction, magnetic fields and shocks, as well as the ageing of oils.

For optimal maintenance, we recommend you bring your watch in for servicing every 3 or 4 years to guarantee its longevity.

Please review this booklet, which provides you with the necessary information to enjoy this remarkable timepiece.

TOURBILLON 2 HANDS

WINDING THE WATCH

1. With the crown in position 0, turn clockwise until you feel resistance.
The watch is wound.
2. Some watches will be manufactured with a skeleton movement.
You should be able to see the balance wheel start to move rapidly to indicate the watch has sufficient power.

NOTE: Daily winding is recommended. When manually winding a watch always turn the crown in a clockwise direction. Do not force the crown when you feel the spring become tense toward the end of the winding process.

TIME SETTING

1. Pull the crown out to position 1, its maximum extension.
2. Turn the crown either clockwise or anti-clockwise until the watch hands are positioned at the desired time.
3. When the desired time is reached push the crown back to position 0.

HOW TO USE A DEPLOYMENT CLASP

WATER RESISTANT

All Nubeo timepieces are designed with a minimum water resistance rating of 5 ATM (50m). The water-resistance of a timepiece protects the movement from dust, moisture, and risk of damage to the movement should it be immersed in water.

Please see chart for guidelines for the recommended exposure of various water ratings.

It is important not to attempt to adjust the position of the crown while the timepiece is in contact with water. Water can enter the case causing damage to the movement.

For timepiece with screw-down crowns, it is important to ensure the crown is in the proper position and completely locked before contact with water.

For timepieces with chronograph functions, do not engage the chronograph under water, as water may leak in the case and cause damage to the movement.

USE PRECAUTIONS - RESISTANCE TO WATER

All Nubeo timepiece are designed to withstand use as indicated on the following chart. **Always make sure the crown is screwed-down completely before use.**

WATER RESISTANCE CHART	30M/ 3ATM	50M/ 5ATM	100M/ 10ATM	150M/ 15ATM	200M/ 20ATM	300M/ 30ATM	500M/ 50ATM	1000M/ 100ATM

CARE AND PRECAUTIONS

Each Nubeo timepiece is designed and manufactured to exceed the highest of standards. In order to ensure optimal performance and longevity from your timepiece, please review the simple guidelines for care and precautions of your new Nubeo timepiece.

CARE

Your timepiece should be cleaned with a soft cloth and water only. Do not submerge your timepiece. Your timepiece should be rinsed clean and dried with a soft cloth after any saltwater use. In order to maintain the 'new look' of metal bracelets, we recommend periodic cleanings of the bracelet. Dip a soft brush in warm soapy water and gently rub bracelet clean. We advise having your timepiece serviced every 36-48 months to ensure long use and trouble-free operation.

GENERAL INSTRUCTIONS FOR MECHANICAL AND AUTOMATIC WATCHES

When manually winding a watch always turn the crown in a clockwise direction.

Do not force the crown when you feel the spring become tense toward the end of the winding process.

Daily winding is recommended even if you believe that your watch has enough power, its always a good idea to give your mechanical watch a quick wind before wearing it for the day.

Automatic watches can also be manually wound by turning the crown clockwise in position 1. It is recommended that if your watch has completely run out of power you manually wind it (with about 10 turns) before wearing.

Try to avoid exposing your watch to strong magnetic sources (for example, smartphones, loudspeakers) as these may have an adverse effect on the movement.

TWO (2) YEAR INTERNATIONAL WARRANTY

Your Nubeo watch is warranted for a period two (2) years from the original date of purchase under the terms and conditions of the warranty. The Nubeo warranty covers materials and manufacturing defects. A copy of the receipt or dealer stamp in the warranty booklet is required for proof of purchase.

During the warranty period the watch movement, hands and dial are the only components covered under this warranty. A covered component will be repaired or the watch will be replaced free of repair charges, if it proves to be defective in material or workmanship under normal use.

NOT COVERED BY WARRANTY

- Damage to lens or strap.
- Normal wear and tear.
- Malfunction and deterioration from accident, negligence or tampering.
- Water damage resulting from improper usage.
- The content of the warranty has been altered.
- There is no presentation of the warranty.

This warranty is void if the watch has been damaged by accident, negligence of persons other than authorized Nubeo sales or services agents, unauthorized service, or other factors not due to defects in materials or workmanship.

REQUESTING WARRANTY AND OTHER WATCH REPAIR

Should you require work under warranty, please send in your watch, a copy of your sales receipt and/or the warranty booklet with dealer stamp and a description of the problem to the authorized international watch service center closest to you.

For service work that is not covered under this warranty, the service center may perform the services you request for a charge dependent on watch style and type of work requested. These charges are subject to change.

For repairs of your Nubeo watch, we recommend that you contact an authorized Nubeo dealer or the authorized international watch service center closest to you.
