Production Methods

Formulated using Straight Hemp Living Essence™, which is crafted from extracts of fresh and dry hemp specially selected to contain the right amount of CBD, THC and terpenes that helps support stress, anxiety, and pain.

Water is used to extract terpenes from fresh hemp, and CO2 to extract cannabinoids from dry hemp. All hemp is grown in Colorado and Oregon.

The water extraction produces a living essence, and ensures we get the fullest spectrum of terpenes from our plants, the CO2 extraction ensures we get the CBD and THC.

We then add these extracts to one another in a specific ratio of terpenes to CBD, mimicking nature's own recipe, a peak ripe hemp flower. This isn't some gimmick! When taken together the terpenes and cannabinoids synergize to create the Entourage Effect, a potent healing effect greater than CBD alone.

Not all terpenes are the same, there are 100's and it's important to pick the right ones, hence the importance of strain selection.

We then blend Straight Hemp Living Essence™ with cold pressed organic hempseed oil, and voila! Our simple but powerful Full Spectrum CBD Oil is born.

All products produced in small batches using cGMP methods, and rigorously tested for quality, in a certified facility.
