

MAX LOAD 2.5KG / 5.5LBS

BOLT GRIPPER

H02041

The Bolt Gripper is a spring-loaded mechanism that allows large structural bolts to be safely tethered whilst they are being installed.

The Bolt Gripper is world-first drop prevention tool designed specially for industrial M30/M36 sized bolts.

Ideal for any steel workers operating in industrial construction, this is a robust and efficient piece of safety equipment.

Large structural bolts are a common dropped object risk. Until now, there hasn't been a way of tethering large bolts and keeping them secure from drops when being installed at height.

Made in the UK and constructed from lightweight aluminium, this an essential piece of safety equipment for any steel worker operating at height.

MAX LOAD 2.5KG / 5.5LBS
BOLT GRIPPER
