WORKSHOPS

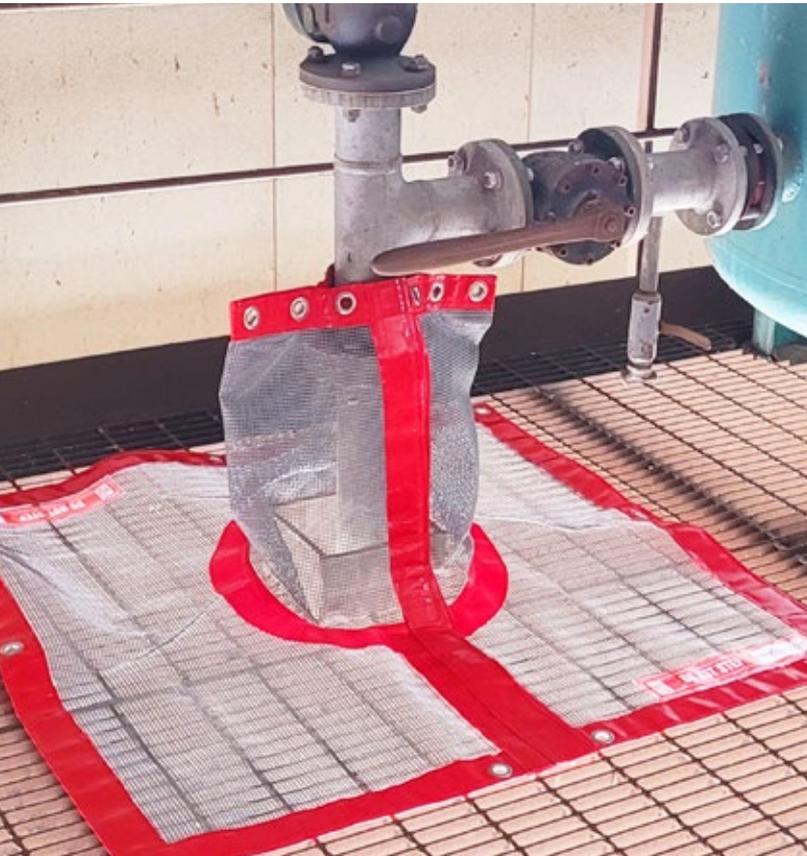

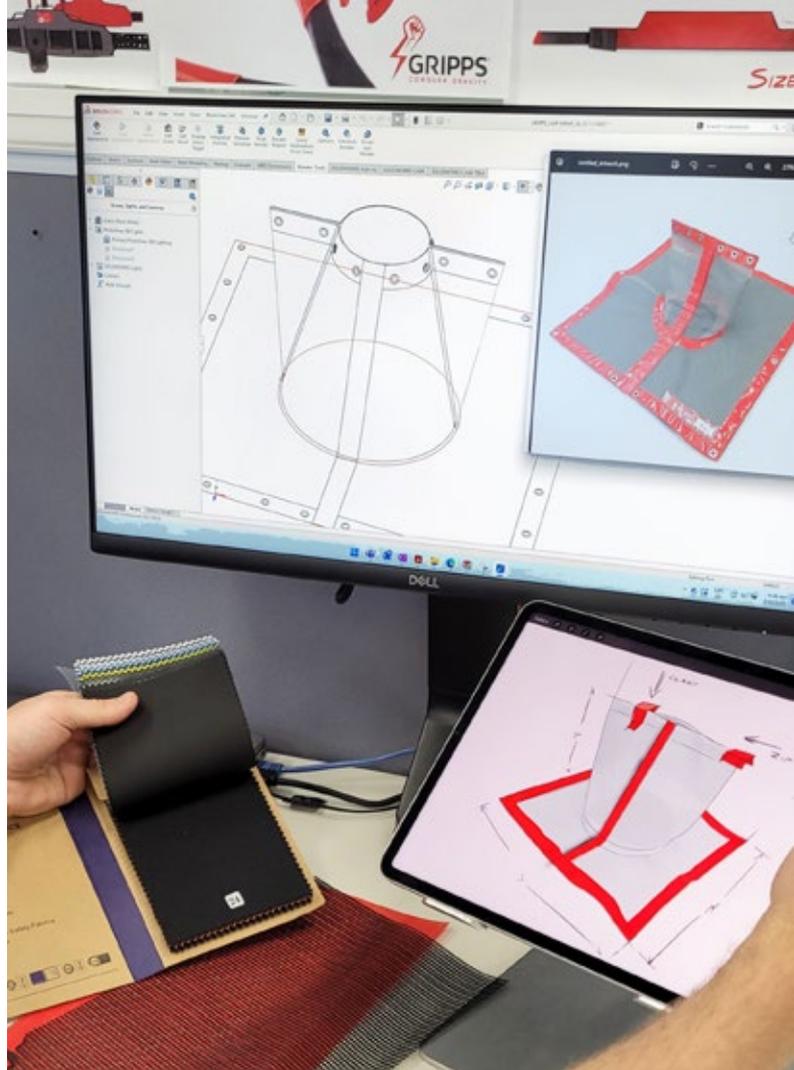

The comprehensive range of GRIPPS solutions has been engineered to eliminate one of the biggest hazards on height projects across the globe. Innovative, functional & certified the GRIPPS range of equipment will deliver a significant safety advance on any height project and our training and awareness packages will promote and nurture a culture of dropped object prevention with all stakeholders.

WE LOVE INNOVATION

GRIPPS has become well-known for innovation in the safety market. We strive to bring impactful, lasting and efficient products that meet the need of our customers. We work directly with end users and stakeholders from companies across various industries and understand the dangers of working at height.

Our team is committed to the highest level of consideration and design for every product. We pride ourselves on the relationships built with our customers and always ensure complete satisfaction and trust in the products that GRIPPS develop.

This commitment to customer satisfaction has allowed GRIPPS to become one of the world's leading suppliers of safety products.

CUSTOM PROJECT?

Are you having trouble finding a solution to a specific risk on your worksite? Its possible that the product you need simply just does not exist yet! This is where GRIPPS can help.

Working closely with companies around the globe we have developed many custom solutions.

For example, GRIPPS 'Gap Wrap' was a result of the close work with Bechtel Corporation. Bechtel Identified a void around floor penetrations that needed a better solution. So, GRIPPS generated concepts, created prototypes and refined the design before successfully releasing the 'Gap Wrap' range in 2022.

INDUSTRY LEADING DROP PREVENTION TRAINING

Available on-site, in our dedicated GRIPPS academy or 100% online, get theoretical & hands on training in tool tethering and drop prevention best practices.

Our course will teach your workers about the vital knowledge they need for working at height and how to effectively use tool tethering equipment with all types of tools.

If your team require training, then partner with GRIPPS today. Reach your safety training goals faster and easier with GRIPPS. We act as strategic safety training partners and even offer customized training solutions that helps drive implementation.

LEARNING OUTCOMES:

- **FALLING OBJECTS RISK AWARENESS**
- **THE CATT METHODOLOGY**
- **RISK ASSESSMENT & HIERARCHY OF CONTROLS**
- **THE RANGE CORRECT USE**
- **WORKING SAFELY WITH TOOLS AT HEIGHT**

FACE-TO-FACE

TRAINING COURSE OUTLINE:

MODULE 1 DROPPED OBJECT RISK AWARENESS

Learn how deadly an impact even the smallest of tools can create when being dropped at height. Demonstrating the immense, the immediate and long-term effects of dropped objects, this module is an eye-opener for industrial workers.

MODULE 2 DROPPED OBJECT RISK ASSESSMENT AND THE HIERARCHY OF CONTROLS

In this module, we will uncover what makes up the Hierarchy of Controls and how these controls impact you as a worker.

MODULE 3 WORKING WITH TOOLS AT HEIGHT

Discover what can cause drops, what to be aware of when tethering tools and learn about best practices when working at height.

MODULE 4 TOOL TETHERING USING CATT

In this module, we introduce the GRIPPS CATT methodology. You'll discover why this process is simple and effective for tool tethering correctly.

MODULE 5 THE GRIPPS RANGE & CORRECT USE

Learn how GRIPPS world-class tool tethering equipment is put to use correctly. It's one thing to have tool tethering equipment, but it **MUST** be used correctly. Discover the wide range of options available for different scenarios and various sizes of tools.

CATT TETHER PROCESS

The GRIPPS CATT method, is an acronym for remembering a highly effective system to safe tool tethering. The acronym is short for **CONNECT, ANCHOR, TETHER** and **TRANSPORT**.

It is important to not only buy the correct and safe equipment for you or your workers, but also ensure that everybody working at height understands the 'how to' for implementing best practice drop prevention. Widely recognised, the CATT system can be used by any worker as a means of approaching tool tethering.

C

CONNECT

Attach a Connection point to your tool that has the correct load rating, is suited to the task at hand and your work environment.

A

ANCHOR

Identify the Anchor point that you will be securing back to that is suited to the weight of your tool. This will be to the height workers person ie a load-rated, work belt, wrist attachment or tool bag, or the structure / equipment that is in use, if a suitable anchorage point is available.

T

TETHER

Select a tether that has a suitable load rating, length and is suited to the task at hand.

T

TRANSPORT

Identify how your tools and equipment will be transported around your project. Remember, almost a third of tool drops occur while tools are being carried between work areas! Certified tool bags and pouches are essential for eliminating dropped tool incidents on site.

ARE YOU DUE FOR A DROPS AUDIT?

The GRIPPS® on-site audit is a critical part of risk assessment for works at height, allowing you to address any blind-spots before they become incidents.

Our certified auditors will travel to your worksite and assess all operations at height, providing a comprehensive report identifying risks and solutions.

Enquire about GRIPPS audits, which will provide a professional and thorough external resource for your team.

The first step in a successful Dropped Object Prevention Strategy is building awareness around the risks associated with working at height.

Whether it's a toolbox talk, lunchroom presentation or live dropped object demonstration, we can help you drive awareness and change habits.

Leave a lasting impression with a keynote address from dropped object survivor and brand ambassador Paul Weatherson, who intimately discusses the human cost of a dropped object incident.

WHAT IS THE ANSI/ISEA 121-2018 STANDARD?

The ANSI/ISEA 121-2018 standard outlines prerequisites for 'minimum design, performance, and labelling requirements for solutions that reduce dropped objects incidents in industrial and occupational settings.'

The U.S. national standard ANSI/ISEA 121-2018 was written by the International Safety Equipment Association (ISEA), an ANSI-accredited standards developing organization. The American National Standards Institute (ANSI) is responsible for the management of standards and conformity assessment activities in the United States.

When it comes to working at heights, using products that meet the ANSI/ISEA 121-2018 standard will help provide a greater degree of trust in product performance, than those without this standard. At GRIPPS, wherever possible, we recommend to choose products that comply with this widely recognised standard.

The standard provides minimum requirements related to anchor attachments, tool attachments, tool tethers and containers used to prevent dropped objects in the workplace.

EUROPEAN GLOVE STANDARDS

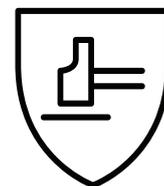

EN388:2016

The European standard DIN EN 388 outlines prerequisites for labelling of safety gloves against mechanical risks when carrying out work. This standard outlines the testing methods that must be performed and passed correctly before gloves can be sold within Europe. Largely recognised globally as an integral standard for comparing gloves and understanding practicality of a pair of gloves for different working situations.

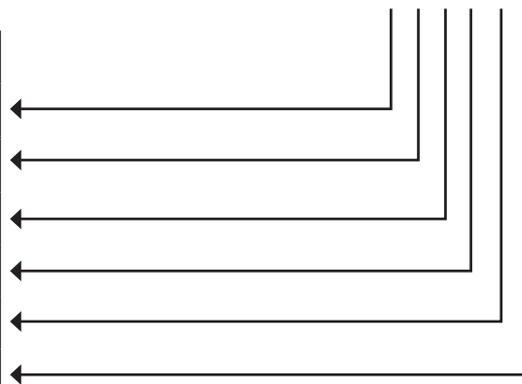

The stresses tested for this standard include resistance to abrasion, blade cut resistance, tear resistance, puncture resistance, cut resistance (TDM test ISO 13997) and Impact Test. The diagram below outlines, what each number part of the standard symbol indicates and the scale of ratings.

TEST	RATING
Abrasion	1-4
Cut (Coup Test)	1-5
Tear	1-4
Puncture	1-4
Cut (TDM-100 Test)	A-F
Impact Protection	P,F,X

EN 388:2016

4542CX

With the first four stresses listed above, the higher the number, the better the rating meaning, more resistance to abrasion, a higher level of cut protection or stronger material. For the Cut test, the further along the alphabet, the better the rating, with F the highest level. If a glove has an impact protection, this information is given by the letter P (Pass). If pertaining to F, the item failed. If the gloves showcase X, then the glove has not yet been tested.

AS/NZS 2161.3:2020 AUSTRALIAN + NEW ZEALAND STANDARD

Within Australia and New Zealand, the current testing standard equivalent to EN388 is the AS/NZS 2161.3:2020 standard - Occupational protective gloves Protection against mechanical risks. However, both EN388 and ANSI 105 are widely recognised internationally and within Australia/New Zealand.

AMERICAN GLOVE STANDARDS

ANSI 105-2016

The American National Standard For Hand Protection ANSI 105-2016, classifies and ranges gloves related to mechanical protection. This standard includes its own unique properties and markings, different to the european EN 388 system, but is equally treated as another major global standards for gloves.

Like the EN 388 standard, gloves tested against the ANSI 105-2016 standard also receive tests for abrasion resistance, cut resistance and puncture resistance.

OLD CUT LEVELS VS NEW

The newest ANSI 105-2016 standard ranks gloves on cut level testing scale from A1 (being lowest grade) to A9 (the highest grade). This system has replaced the former cut level ratings scale of C1 to C5. The new system scaling from $\geq 200\text{g}$ to $\geq 6000\text{g}$. The former Cut Level 5, now equates to A5 of the new standards, which situates as a cut level considered as Medium-High and is suitable for many industrial work applications.

PREMIUM ENVIRONMENTAL HEIGHT SAFETY GLOVES

If you're looking for a glove that offers exceptional hand protection, comfort and dexterity, look no further than **GRIPPS 'C5 Eco' and 'C5 Eco Impact'**.

These gloves are **made from recycled plastics** and provide world-first anchor points so users can tether small hand tools whilst working at height. **Compliant with ANSI-ISEA 121-2018** standard and with a C5 cut rating, these gloves are also incredibly comfortable to wear. Blending innovative design with durable materials, the GRIPPS C5 Eco and C5 Eco Impact provide resistance to lacerations, added grip and a sound solution for drop prevention for small hand tools.

These gloves are also **carbon neutral certified**, with every pair being offset thanks to our partnership with the *Low Carbon Economy*.

ENCAPSULATION & MATTING

GAP WRAP 12" / 24" / 36"

PATENT PENDING

The GRIPPS Gap Wrap is a unique encapsulation device, designed to eliminate the gap found around pipes that run vertically through jobsite flooring.

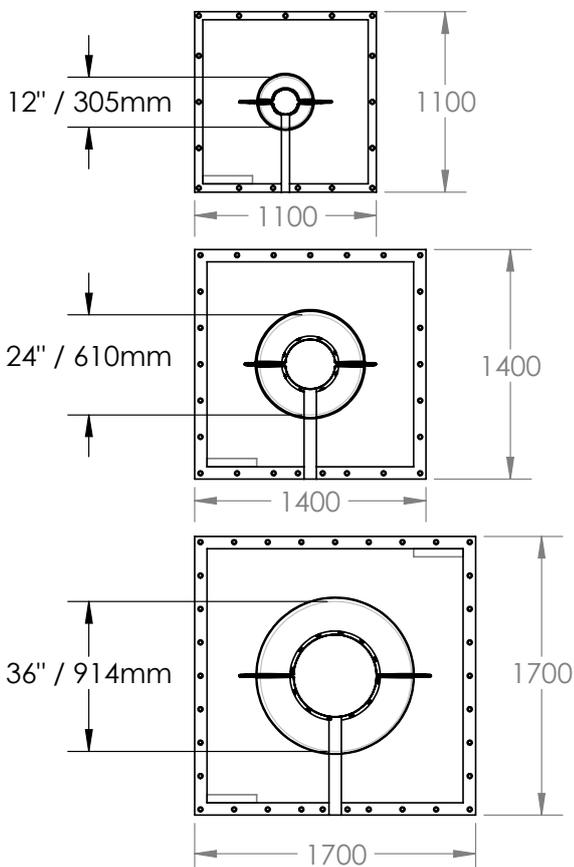

It is quick and easy to install, can be moved from one pipe to another and has a heavy-duty Velcro closure that accommodates a variety of pipe diameters and cross sections. Three models cover all pipe diameters up to 36" or 914mm. The Stainless steel eyelets can easily be tied together for extra security.

Durable PVC coated polyester mesh allows workers to see the void beneath and bright red PVC edging can be fixed down to a variety of materials, ensuring the GRIPPS Gap Wrap can withstand larger dropped objects.

KEY FEATURES

- Fire Resistant to AS1530.3
- Fit Pipe up to 36" or 914mm
- Re-usable and adjustable
- Velcro closures and eyelets for added security
- PVC coated Polyester mesh. (The same high-quality mesh used in our GRIPPGRID matting)
- Red PVC edging for strength and visual warning
