

SKIN-TO-SKIN NEWBORN CARRIERS

A NEW KIND OF CARRIER

Nesting days is a skin-to-skin newborn carrier that is both hands-free and easy to use. When a mom wears her newborn with a nesting days carrier, she discovers the joys and benefits of skin-to-skin contact. Our goal is to help the new, modern mom enjoy wearing her baby while giving her the independence she needs in everyday life.

EASIER

No more confusing baby wraps. Our 3-step carrier is hassle-free. Just step in, pull up, and tie the wings around your baby.

HEALTHIER

Forget those postpartum blues, and say bye bye to back pain—our carriers are ergonomic, and toxin-free.

HAPPIER

Skin-to-skin contact boosts oxytocin levels, lowers cortisol, and facilitates breastfeeding.

SMARTER

Inspired by your favorite activewear, our fabrics are fast-drying and stain-resistant.

How does our carrier work?

Step in.

Pull waistband to bra line.

Pull straps over shoulders, then lower baby into inside wing.

Tie off wings of carrier.

A little bit about us

Nesting Days was founded in 2013 by Julie Arvan, a postpartum doula, educator, businesswoman and skin-to-skin expert. Seeing the need for a carrier designed specifically for the needs of a newborn, Julie invented a hands-free solution that maximizes skin-to-skin contact between mother and child. Nesting Days carriers are made exclusively in San Francisco, CA.

What's the word on the street?

"I'm writing you the biggest thank you an email can offer! My Nesting Days Carrier is the ONLY reason I can manage to get anything done, from bottle washing to Christmas shopping. I had to take time out to send you a sincere thank you. Your carrier is honestly the best..." —Rachel

"This has become my go-to gift for new moms and the friends who received one can't stop raving about it...You're going to love going skin-to-skin!" —lucieslist.com

This skin-to-skin carrier is fantastic. It feels absolutely secure, snuggles the baby close to the chest and keeps the hands free...5 stars for this. Would recommend to anyone looking for skin-to-skin carriers and contact. —Lisa
