Black Mass

SALEM, MA. 01970

www.blackmasselectronics.com

BLACK LIVES MATTER. TRANS LIVES MATTER.

The 1312 Distortion is based on everyone's favorite rodent-themed distortion pedal. The real star of this pedal is the Clip control. With the eight-way rotary diode clipping switch, it's like having eight different distortion pedals at the turn of a knob. This pedal features true bypass switching and is happy anywhere in your pedal chain. All Black Mass pedals are built in Salem, Massachusetts with a little bit of magic and a whole lot of love.

More important than anything I can say about this pedal, is the fact that 50% of the profits have been donated to organizations working to dismantle oppression in all its forms.

POWER:

- Standard 2.1mm center negative power only.
- 9v DC ONLY.
- Do not run at higher voltages.
- Current Draw: <100mA.
- Use an isolated power supply. Daisy chains will often work fine but can introduce unwanted noise.

CONTROLS:

Level: Controls overall output level

Filter: Turn clockwise for more treble

Gain: Controls the amount of drive/distortion

Clip: 8 Way rotary switch for selecting clipping diodes. Rotating clockwise, starting at "noon," clipping options include:

- VINTAGE GERMANIUM
- RED LEDS
- SILICON
- ASYMMETRICAL MOSFET
- GERMANIUM/SILICON
- MOSFET
- ASYMMETRICAL SILICON
- QUAD SILICON

Internal Dipswitches:

Factory Setting.
Charge Pump ON.
9V supply ONLY.

Charge Pump OFF.
18V supply ONLY.

NOTES:

- V3 features an internal charge pump to run internally at 18V off a standard 9V supply.
- Using the wrong power supply voltage / dipswitch settings can cause permanent damage to your pedal. BE CAREFUL!
