

The **STEAMCARE** range

Specially developed to provide effective decontamination

- **Specialist Healthcare Tools - A00997/A01200**
- Healthcare specific accessories specially developed for use with dry steam in high risk contact areas
- Tackle infection control issues with confidence
- Independently validated decontamination results
- Helps to achieve consistent sanitation to the higher standards
- To be used in conjunction with microfiber for best results
- Ergonomic & easy to use
- Area specific Standard Operating Procedure available upon request for user training

The technology behind the tools is based on the application of controlled superheated dry steam vapour (DSV) by purpose-designed steam vapour delivery tools, allowing its safe use in the daily and periodic cleaning practice within a healthcare environment. When used in accordance with our Standard Operating Procedures it ensures an effective and hygienic decontamination

Laboratory evaluations using OspreyDeepclean Dry Steam Vapour machines have established the safe removal of hospital infection strains in less than 2 seconds. Trials at University College London Hospitals* confirm that surfaces contaminated by each of the test organisms were successfully decontaminated by the OspreyDeepclean process - without chemicals.

The study focused on the decontamination of high-risk, high-contact surfaces: bed frames, mattresses, and chairs, from MRSA, Acinetobacter, Klebsiella and the spores of Clostridium difficile.

These results have also been independently validated by the prestigious TNO institute in The Netherlands. Use of the OspreyDeepclean process minimises the need to dismantle equipment or take bedside curtains down for cleaning; beds and isolation rooms are soon safely returned to use.
