

Terrazzo is a composite material, poured in place, used for flooring, base, walls, stair treads, countertops, and other custom products. Terrazzo consists of chips of marble, granite, quartz, glass, shell, etc, and it uses either a cement or epoxy matrix as the binder. Our Terrazzo Stone Trays come in 4 different colors: Rose Gold, Black, White and Grey. They are a single piece of stone and have four pre-installed silicone feet on the bottom. Given the hand finishing natured production of these single-piece stone trays, they will have some minor quality issues outlined in this document. Shown below are possible defects that may be shown upon receiving these stone trays. Defects include:

- Chips inside, around and on the outside of the tray
- Small pieces broken off
- If more than one Terrazzo Stone Tray is ordered at the same time, there might be a chance of a slight size inconsistency on the tray lip width, some are wider than others.

Shown below are examples of acceptable and unacceptable blemishes

Trays may have slightly different lip sizes due to hand finishing.
