

Calf-STAR

MINI BATCH 2.0

Colostrum / Milk Pasteurizer

What is the Mini Batch 2.0?

The Mini Batch is a Colostrum Milk Pasteurizer.

How it works:

- Heat treats colostrum/milk up to 141° F or desired temperature.
- Holds product for 1 hour or desired time, then cools to desired temperature; either feeding temperature or cold water temperature.
- A buzzer sounds to let you know when all processes are complete!
- Enables pasteurizing 3.5 or 10 gallons of whole milk at a time.
- Temperatures and times are set to specifications from university studies (i.e. 141° for 60 min) and can be adjusted to fit your needs.

Features:

- PLC touchscreen
- Temperature trend monitoring
- Water saving feature
- Water heating
- No electric heating element
- No chart recorder needed, everything saved on the PLC touchscreen
- Insulated bucket
- Much more efficient

CAUTION: If colostrum is heated beyond 141°F it will change viscosity.
