Magellan® eXplorist® TRX7
Off-Road GPS Navigator

Quick Start Guide
The Magellan eXplorist TRX is an Off-Road vehicle navigation aid designed to assist you in driving on your route and arriving at your selected destinations.

Please check with your state or local law enforcement for applicable regulations regarding mounting to the windshield.

The driver should enter data or program the Magellan receiver only when the vehicle is stopped. Only a vehicle passenger should enter data or program the receiver while the vehicle is moving.

It is your responsibility to comply with all traffic laws. Every attempt is made to ensure that the database is accurate. However, roadways, points of interest (POIs), and business and service locations may change over time.

Keep the receiver safe from extreme temperature conditions. For example, do not leave it exposed to direct sunlight for an extended period of time. The maximum operating temperature is 140°F (60°C).

Take care when mounting the receiver in your vehicle, whether using the windshield mount or other mount or accessories, that it does not obstruct the driver’s view of the road, interfere with the operation of the vehicle’s safety devices such as airbags, or present a hazard to occupants of the vehicle should the receiver be dislodged while driving.

You assume the risks associated with damage to your vehicle or vehicle occupants as the result of your choices in mounting the receiver.

The battery is rechargeable and should not be removed. In the event it should need to be replaced, please contact Magellan Technical Support.
