FIRST TIME SETUP: BLUETOOTH PAIRING

- 1 Turn on the Bluetooth in your device settings.

- 2 When the Flex Wireless Headphones are powered off, press and hold the Power Button for approximately 10 seconds. Voice prompts "Hello".
Once powered on, the headphones will automatically go into pairing mode.

Fast blinking blue indicator light indicates searching for Bluetooth device.

- 3 Search for "JLab Flex BT" on your Bluetooth device and connect.
When the headphones are paired, voice prompts "You are connected" and **blue indicator light will flash slowly**.

RECURRING USE

Once Flex Wireless Headphones have initially paired to your device, they will auto-connect to your Bluetooth device when powered back ON. (Follow **BUTTON FUNCTIONS** instructions)

Notes:

- Bluetooth is a wireless radio technology, which means it is sensitive to objects between the headphone and the connected device. The headphone is designed to be used within 33 feet (10 meters) of a connected device, with no major objects in between (walls, etc.).
- Once successfully connected, the headphone will memorize your device and automatically pair when turned on in the future. Only one device may be connected at a time. To pair a different device, first unpair the current one through its Bluetooth settings.
- If for any reason Bluetooth connection is lost, manually reconnect your Bluetooth device.

MICRO USB
CABLE

CHARGING

Note: For optimum performance, charge overnight with Micro USB cable prior to using.

Connect the Micro USB to the headphone and connect the USB into a computer or AC adaptor (not included). Make sure the USB connection has a power output source.

Solid red light indicates the headphone is charging. When it **turns off**, charging is complete. Allow about 3-4 hours to fully charge.

WARM-UP YOUR HEADPHONES

Optional: Burn-in is the process for exercising new audio equipment. We recommend 40 hours of burn-in time for most headphones to reach optimal performance. The main purpose of the process is to loosen the diaphragm of a newly crafted headphone and to stress the headphone driver. Normal, everyday use can also burn-in the headphones though JLab's proprietary burn-in provides an ideal mix of sounds and frequency sweeps to achieve this.

Burn-in your audio equipment with the JLab Audio app available on the App Store and Google Play.
Or access the burn-in method at: jlabaudio.com/burnin

CAUTIONS

- Avoid getting moisture or liquids on the headphone cups.
- Avoid extreme heat, cold, and humidity.
- Avoid dropping or crushing headphones, stressing the cable by rapid pulling or extreme force, or bending the cable at a sharp angle.
- Wax may build up in headphone cups, lowering the sound quality. Carefully remove the wax with a cotton swab or other small tool to improve the sound quality.
- If you experience discomfort or pain, try lowering the volume or discontinuing use temporarily.
- If you experience regular discomfort while using this product, discontinue use and consult your physician.
- We recommend you treat your headphones as you would a nice pair of sunglasses and keep them in safe location when not in use.
