## Snow Guard Product Sheet

### Description

Snow Guard is a device used to retain tiles, snow/ice and other debris and stop it from falling from roofs to another surface, therefore preventing damage and injury.

### Dimensions Of Snow Guards

Snow Guards is available in two sizes, 150mm (6") and 225mm (9"). Both come in 2 metre lengths

Wire thickness: The external frame wire is 6mm thick, the horizontal support is 4mm thick and the internal mesh wire is 2mm thick.

### Types Of Brackets:

There are 3 types of brackets available to fit Snow Guards. All three types are available in 150mm and 225mm to suit the two sizes of Snow Guard

#### Galvanised Half Round Bracket:

For fixing Tile Guard behind the gutter to allow debris to collect in the gutter

#### Galvanised Ogee Bracket:

For fixing Tile Guard in front of the gutter to prevent debris collecting in the gutter

#### Galvanised "V" Type Bracket:

For fixing Tile Guard to rafters, allowing debris to collect against the Tile Guard.

### Fixing Snow Guard Brackets:

Either 2 or 3 brackets should be used per 2m length of Tile Guard. The final number of brackets used is down to user discretion.

There is no definitive way to fix the Snow Guard to brackets, methods used include :-

- Tying using galvanised tying wire
- Tying using cable ties
- Connecting using bolts, nuts and washers
- Weaving the guard through the brackets
