**FITTING INSTRUCTIONS -
for "No-Pull" Solution Position**

- NOTE: Use with Standard Collars
- TO USE AS "NO-PULL" SOLUTION:**
- 1 Clip ThunderLeash onto your dog's collar and slide the leash strap into the "No-Pull" Solution Position.
 - 2 Wrap the ThunderLeash around your dog's torso and slide the leash strap into the "No-Pull" Solution Slot (terms defined on separate page).
 - 3 Adjust the **Slack Buckle** until ThunderLeash stays loosely against your dog's torso without tension on the leash. You should be able to easily slide two fingers between the leash and your dog's chest when your dog is not pulling.
 - 4 Adjust the **Safety Buckle** to prevent too much pressure from being applied when the dog pulls. Follow guidelines in the table to position the **Safety Buckle** properly.

READ BEFORE USING YOUR THUNDERLEASH

While the use of a ThunderLeash in the "no pull" configuration applies much less pressure on the neck than connecting directly to a standard collar, the "no-pull" configuration does not eliminate all pressure on the neck or trachea. If your dog shows any signs of distress from pressure on the neck when using a ThunderLeash, stop use and contact us. If your dog has a sensitive neck or trachea, we do not recommend using a ThunderLeash.

DO NOT USE FOR TIE OUT

SAFETY BOOKLET**

.....

WARNING:
TO AVOID INJURY, READ DIRECTIONS
CAREFULLY BEFORE USING THE
LEASH.

TERMS FOR FITTING INSTRUCTIONS

SAFETY BUCKLE ADJUSTMENTS

Approximate. Adjust as needed.

DOG WEIGHT	LEASH SIZE	Distance Between Safety Buckle and Slack Buckle
< 12 LBS	XS	~1-1.5 INCHES
12 - 25 LBS	S	~1.5-2 INCHES
26 - 100 LBS	M/L	~2.5 INCHES

INSIDE

WARNING:

ThunderLeash is intended for pets only. Keep out of reach of children. All pets should be supervised while using ThunderLeash.

Because ThunderLeash is retractable, special precautions are necessary to reduce the risk of injury. Please read the safety booklet carefully before use.

ThunderLeash is NOT a toy - it is solely intended for use with obedient, well-trained dogs, and should be operated by a responsible adult only.

ThunderLeash shall also not be used near small children, including children in strollers or carriers. To ensure safe and proper leash function, use ThunderLeash only on dogs that do not exceed the weight limit requirements.

Before using the retractable leash, please ensure that the metal ring on the dog collar can withstand your dog's strength. Excessive force caused by extremely hard pulls, lunges or running can cause damage to the leash.

NEVER attach ThunderLeash to your dog's ID tag ring, as that ring is not meant to withstand any force. Make sure the hook is fully closed and securely attached.

Do NOT let your dog chew on the leash. **NEVER**

allow the leash to rub against any rough, ragged, or sharp surface. Do **NOT** tie the leash around a tree, or any other object, and to ensure safe functioning of the leash, do **NOT** add accessories to the leash. Always inspect ThunderLeash prior to use. Discontinue using the leash if you notice any damage.

RISK OF INJURY:

To avoid the risk of facial or bodily injuries to people as well as animals, read the directions carefully before use, and use ThunderLeash only as instructed. Potential injuries may include but are not limited to eye, face and bodily injuries, such as burns, abrasions, cuts and/or amputations of limbs.

If the leash or your dog's collar breaks, or if the leash separates from your dog's collar, the cord and hood can snap and cause potentially serious damage to the head, including eye damage, broken teeth, and bruises.

To limit the risk of accidental cuts and abrasions do not grab the leash while your dog is attached. If the leash wraps around fingers or catches on a ring, a hard pull on the cord can potentially amputate fingers or cause fractures. To avoid such injuries, we strongly advise not to touch the cord or let it wrap around any part of your body, while your dog is attached. If the cord gets

entangled, gain control of your dog before untying it.

Retractable leashes are longer than regular leashes, giving your dog more freedom to run while being leashed. Therefore, they can also build up more speed and pull harder on a retractable leash, and possibly make you fall. It is important to keep your dog from running away from you immediately by pressing the **BRAKE** button. Don't allow for any slack in the leash, as this can lead to sudden pulls and possibly falls for you or a bystander. Only use ThunderLeash on foot, never while riding or operating a device with wheels, such as a bike or golf cart.

DO NOT use ThunderLeash

- if on medication that makes you sleepy or groggy
- if under the influence of alcohol or drugs
- with choke-type collars

DO NOT attempt to open the retractable unit!

If you have problems with your ThunderLeash, do NOT attempt to repair it yourself.

or email: service@thundershirt.com

HOW TO OPERATE:

To attach or detach ThunderLeash, the leash must be fully retracted and the brake locked. Make sure that your dog is fully under control when attaching or detaching ThunderLeash.

HOW TO OPERATE (con't):

To restrict lengthening of the leash, press down on the brake button and hold down. To release, release the brake button allowing the leash to move in and out freely again.

To bring your dog closer, extend your arm toward the dog and press the brake button while pulling your arm back. Repeat until your dog is at the desired distance.

To lock your leash, press the brake button forward. To release, pull the brake button backwards.

CLEANING AND CARE:

Remove any dirt or debris from the leash and hook. Clean carefully with a damp cloth. To prevent damage to your leash, avoid harsh cleaning products.

If the leash gets wet, pull the cord out of its housing as far as possible and lock the brake. Leave it to dry in safe place, out of reach of children. When dry, carefully retract the leash back into its housing. If ThunderLeash gets damaged, do not try to open the housing or repair any part of the leash yourself.
