

Biological Waterfall Filter

Large mesh media bag.

Features:

310 mm wide spillway

1. Easy liner attachment, clamps between spillway & housing (with sealant against the housing)
2. A choice of 4 water entry points, front, back & each side.
3. 40 mm bulkhead fitting/hose tail supplied.
4. Large bio-media mesh bag supplied (recommended media is scoria)
5. Ridged design, will not crush or distort.
6. The swirl chamber creates an even flow through the bio-media and the round media compartment prevents water from tracking around the sides of the media.
7. When combined with good pre-filtration such as the Aquatic Lifestyles Skimmer this bio-filter only needs cleaning once per year. This means the beneficial bacteria is not being upset every time filters are cleaned which is a problem with combined bio/mechanical filters and the cleaning can be done at the end of Winter when the pond is still dormant.
8. New Zealand Made

Dimensions: 430mm W x 450mm H

Spillway Width: 310mm

Pump Flow Rate: 3,500 LPH to 16,000 LPH

Pond Size: 1,000 to 10,000 litres

Easy liner attachment, clamps between spillway & housing (with sealant against the housing)

Four water entry points around the base. (each side, front & back)

Use the flat entry point that suites best.
