

# *Flack the Yudu* **LIQUID EMULSION SCREEN COATING KIT**

# **GETTING STARTED**

merch**makr**<sup>™</sup>

# Step One: Sensitize Emulsion

Your emulsion must be sensitized before use! Sensitized emulsion is green. Do not use if it is blue. *Minimize exposure to light of any kind, and never expose your emulsion or DIAZO to sunlight!*

1. Fill the bottle labeled DIAZO halfway with water and shake well.
2. Mix the DIAZO solution into the emulsion until you no longer see swirls.
3. Let the emulsion sit for two hours before use.

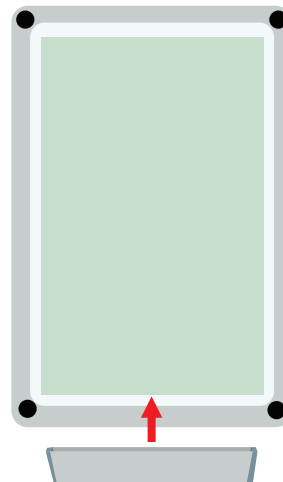

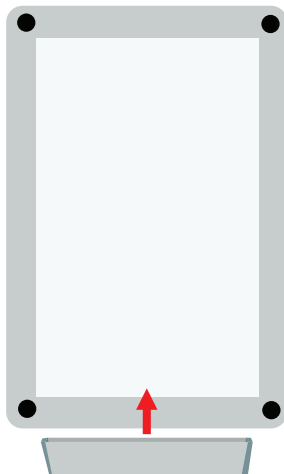

## FOR BEST RESULTS, USE A SAFE LIGHT!

*A safe light will give you enough light to see without exposing your emulsion before you're ready. You can find safe lights and other supplies at [merchmakr.com](https://merchmakr.com)!*

# Step Two: Coat Your Screen(s)

1. Start with the screen standing upright.
2. Fill the scoop coater with 1/2 cup of emulsion.
3. Coat the “face” of the screen first. (the side without a lip).
4. Flip the screen and coat the inside. Both sides must be coated.
5. Let dry in front of a fan or in the Yudu rack.

# Storage and Exposure

Store unburned screens in a dark place, such as inside a garbage bag in a closet.

Coated screens may be burned using the same exposure time as traditional Yudu Emulsion sheets.

## Clean Up

After removing the ink, spray both sides of the screen with emulsion remover. Rinse with high pressure for best results. If you see image ghosting on the screen after the emulsion is removed, we recommend Merchmakr Pink Power Degreaser/Dehazer to help minimize staining and remove oils that can make coating the screen with emulsion more difficult.

**DO NOT ALLOW EMULSION REMOVER TO DRY IN THE SCREEN.** It may create emulsion lock, rendering the screen unusable.

## HELP!

If you have any questions or problems, you can check out the videos and tutorials on [merchmakr.com](http://merchmakr.com), or contact us in one of the following ways:
