

LATCHPROTECTOR.COM

Installation Instructions:

1. Position flat surface of Latch Protector 3/16" in from edge of door
2. Center the plate, vertically, equal distance from the top and bottom of the lock body. (Do not center to the knob unless this occurs coincidentally.)
3. Using square holes in the plate as a guide, drill two holes 5/16" diameter (1/4" diameter for LP220 and LP270), through the door.
4. On the inside of the door enlarge the hole to accommodate the special fastener. Use a 7/16" drill bit (3/8" drill bit for LP220 or LP270 models)
5. Insert the two carriage bolts (included) through the plate, and secure, with fasteners (included)
6. (Models with Jamb pin include this step) Close door until jamb pin contacts door jamb. Strike head of pin with hammer to mark the location of the pin clearance hole. With door open, drill 5/16" diameter hole into jamb at pin punch location to allow jamb pin to secure the jamb when the door is closed.

Your installation is now complete
