

Radiator Fitting Instructions

The installation of our Contemporary Floating Radiator Covers with Shelves is very simple and you do not need practically tools, just a 8mm drill and a bit. Follow the instructions below and in 10 minutes you will have your radiator perfectly installed.

Measure the cover

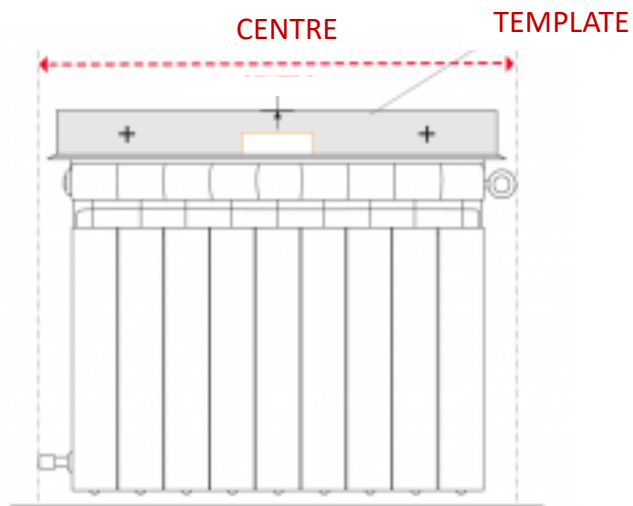

1

Measure from the left end to the right (including the water keys, regulator and pipes) and mark the centre.

Fixing Template

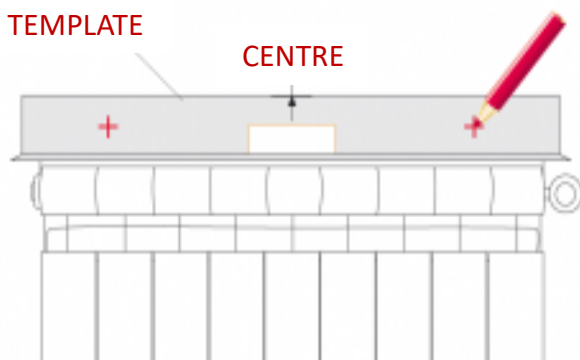

2

Fold the template & rest it on the radiator, put it against the wall, placing the arrow in the centre of the previous measurement

Mark & Drill

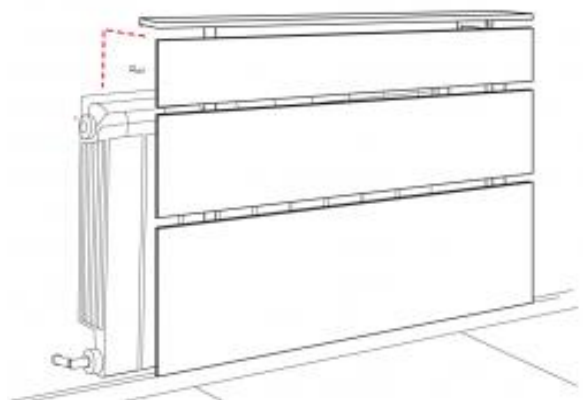

3

Mark with a pencil in the holes of the template, check that the template sits properly on the radiator and the wall. Then drill with an 8 mm bit, place the wall plugs & screw the bolts until the washer stops.

Hang the radiator cover

4

Finally, hang the radiator cover on the plates.
