

3570 Series

Cylinder Mortice Locks

Since its launch in 1994, the Lockwood Synergy Mortice Lock has been the security industry benchmark. Exceptional durability and outstanding reliability guaranteed success in the commercial market.

Introducing Synergy 2, where unrivalled reliability has evolved to combine with an exciting new range of features and functions including:

- Integral hold back function
- Radius latch and face plate
- Integral anti-Lockout function

Conforming with Level S2 (Physical Security) Australian Lock Standard (AS 4145.2-1993) and Level D3 (Durability), the Synergy 2 mortice lock steps up to a new level of locking versatility.

3572

Features

FIRE RATED

1. No Cylinder Cut out

In order to improve the security of the lock the cylinder hole cut out has been removed. This cut out was for fitting of kick-off adaptors which are now not required due to the integral anti lockout function.

2. Reduced number of turn snib adaptors

Fewer turn snib adaptors for a more simplified selection. With the introduction of the integral anti-lockout function there is a reduction in the number of turn snib adaptors.

3. Integral anti-Lockout function

Integrated anti-Lockout function for improved functionality. No more tricky to fit "kick-off" adaptors, with the new Synergy 2 mortice lock, selecting anti lockout is as simple as removing or adding a screw. The screw comes contained for all anti lockout functions as well as primary functions.

4. Radius Latch for increased dead latch throw

The radius latch allows greater dead latch operation for wide door gaps as well as smoother closing function due to decreased friction on the strike.

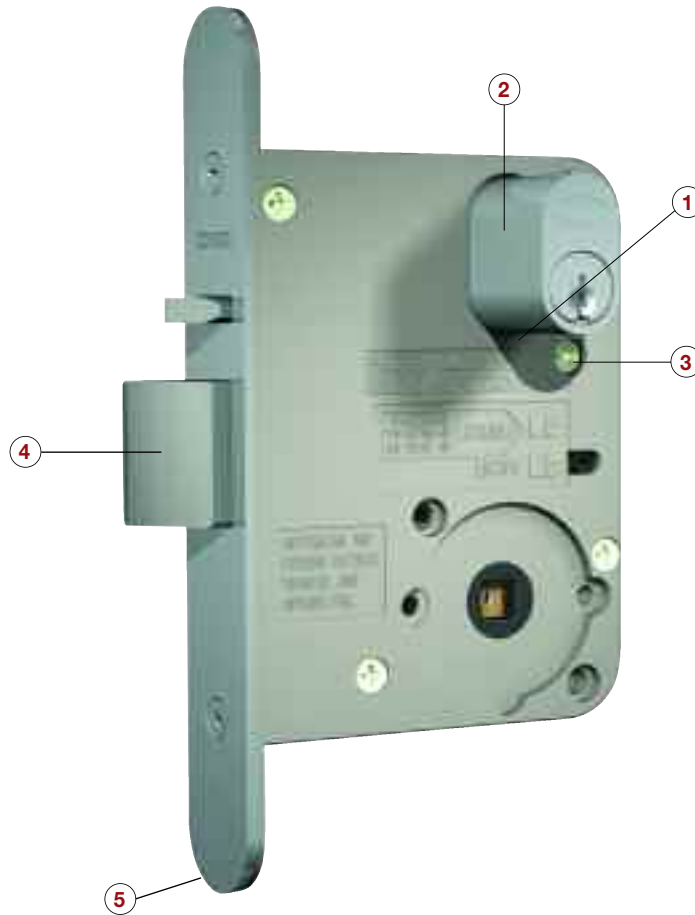

5. Optional Rounded Cover Plate for router installation

An optional rounded cover plate fitting enables easier fitting with routers. For Primary lock order 3572RO followed by the finish code. Standard functions are still supplied with the square cover plate.

New functions also available

• New Latch Hold Back Model

The 3578 model has a new latch hold back mechanism for improved performance and functionality. Utilising the internal locking bar, latch hold back now performs better with minimal projection of the latch. Added to this is the ability to use cylinders and turn snibs in a variety of functions to operate the hold back mechanism. The hold back works by depressing the latch and "locking" the lock with Z, W and M cylinder functions.

• New Key Lock Out Model

For simple key access control the 3577 model incorporates a key lockout whereby the top cylinder can lockout the bottom cylinder if not required. New function 3577Z allows the top cylinder to lockout the bottom cylinder, while function 3577M allows the top cylinder to lock out the bottom cylinder and also retract the latch.

Security

S2 HIGH SECURITY

All 3570 cylinder mortice locks conform with Level S2 (Physical Security) Australian Lock Standard (AS 4145.2-1993). Conformance with Level S3 (Physical Security) is available on request.

Durability

D3 DURABILITY

All 3570 cylinder mortice locks conform with Level D3 (Durability) Australian Lock Standard (AS 4145.2-1993).

Standard Finishes

Bright Chrome	CP
Satin Chrome	SC
Florentine Bronze	FB
Polished Brass	PB

Other finishes on application.
