BOSCH
Invented for life

- ▶ Full two-way IP communication using Plug-in Cellular Communicators
- ▶ Plug and Play installation makes future radio technology changes easy
- ▶ Compatible with new and most deployed Bosch control panels
- ▶ Supports remote installation of cellular modules for improved signal

The Conettix Plug-in Communicator Interface is a four-wire powered SDI2, SDI, or option bus device that provides two-way communication with compatible control panels over commercial cellular networks using a plug-in communicator (available separately).

System overview

Conettix Plug-in Communicator Interfaces (B450/B450-M) work with plug-in communicators for primary or backup alarm communication, remote programming, and other remote applications. The plug-in communicator interface supports Conettix IP protocol with full authentication, 256-bit AES encryption, and resistance to Denial of Service attacks. The interface also supports compatible Bosch control panels with SIA DC-09, CSV-IP. The interface is a reliable way to add cellular network communications to existing or new commercial security and fire installations.

Callout - Description	Callout - Description
1 - Compatible control panel	6 - Cellular carrier network
2 - Panel data bus (SDI2, SDI, or option)	7 - Internet/LAN/WAN
3 - Module	8 - Remote Programming workstation
4 - USB connection for module configuration	9 - Compatible IP receiver (Bosch D6100IPv6 shown)
5 - B44x plug-in communicator (available separately)	

Functions

Conettix IP communication

The following features are supported with the plug-in communicator interface via BOSCH Conettix IP protocol and SIA DC-09 UDP, CSV-IP on supported control panels including:

- IP Alarm communication
- Remote programming
- Personal notification via text or email on supported panels

Addressing

Use the address switch to easily assign a bus address or setup for USB or SMS configuration where required.

Easy configuration

For most installations, the default plug-in communicator interface settings allow installation with no device programming required. An address switch allows easy bus address selection.

For customized network settings, the interfaces support a USB configuration menu, or configuration via SMS. The following control panels support RPS programming:

- B9512G/B9512G-E
- B8512G/B8512G-E
- B6512
- B5512/B5512E
- B4512/B4512E
- B3512/B3512E
- D9412GV4/D7412GV4/D7212GV4

LEDs

Three LEDs provide status and troubleshooting information.

LED	Indication
Heartbeat	Plug-in communicator and control panel connection status
RX	An inbound packet is received on the bus
TX	An outbound packet is transmitted on the bus

Certifications and approvals

Notice

The B450-M has received certifications only as noted. If not noted, the certification applies to the B450 only.

Installation/configuration notes

Mounting considerations

Install in a location with acceptable wireless network signal strength. Mount the module into the interior of a compatible enclosure. Use the 3-hole mounting pattern. Use the supplied mounting screws.

Wiring considerations

The interface connects to a control panel using a data bus connection via the module's terminal strip, or the module's interconnect wiring connectors.

For data bus powered installations outside the compatible control panel enclosure, follow the maximum wiring distances in the technical specifications.
