CONNECTING OF CAMERA

1. No Picture after providing power. May be the power supply voltage abnormality, please check the power supply voltage and pole whether exactitude. Please check all the connecting cable and monitors whether be connected correctly or not. ↓

2. The picture level direction have flowing interference ripples. May be caused by the power supply AC ripples, it need filter the wave of the power supply. Check the monitor and peripheral equipments used.

3. The picture background color changes continuously. The fluorescent lamp's electromagnetic field cause color roll. This is proper phenomenon of the cameras. Reduce the fluore scent lamp numbers or increase the distance between the camera and the fluorescent lamps can improve it. Use power supply external sync. camera can solve it.

4. The picture smear too mass . The power supply's voltage unstable. Connecting cables not connect correctly or have high impedance.
