

Tin Can Lantern

Celebrate winter solstice with a lantern that looks lovely and is re-purposing. Take it outside and then bring inside to watch the lights move on the walls.

If you're learning about constellations, this can be a great one to mark the constellations through and watch glow with the candle light.

Gather:

- Tin can
- Marker
- Nail
- Hammer
- Twine
- Candle

Create:

1. Choose your design and mark where the holes will go on your can with a marker.
2. Hold a nail on each hole and hammer through. Remove the nail each time until you have finished all of the holes in your design.
3. Hammer a hole either side of the top of the can and tie some twine to the holes to create your handle.
4. Put a lit candle inside to see the glow shine through like twinkling stars.
