## Twist Classic bi-wire speaker cable

**CONTINUOUSLY UPDATING ITS** extensive speaker cable and interconnect range following ongoing research and development, this Black Rhodium Twist Classic bi-wire speaker cable comes with two connections at the amplifier end and four at the loudspeaker end to connect to models fitted with bi-wiring terminals.

### Let's Twist again

Despite being a twist of four wires together, there are no problems routing the cable around the tightest of corners. It is continuously twisted along its length to prevent it from acting as a loop aerial and to reduce the effects of interference. At each end of the cable is a large ferrite tube to prevent high-frequency noise modulating the signal. The cable is made from 0.75mm<sup>2</sup> tinned copper conductors with 1.2mm silicone

rubber insulation. It is terminated in gold-plated Z plugs and is available in 3m and 5m lengths. The pairs of cables are wound in the direction opposite to their original twist, which is said to produce a clearer sound.

Using the Twist Classic to connect my valve monoblocks to my transmission line speakers, I start auditioning with Beethoven's *Symphony No.9* performed by the Berlin Philharmonic conducted by Herbert Von Karajan. The initial quietness at the beginning of the first movement confirms that the cables are not prone to external interference. As the music explodes into the exuberant crescendo of sound, the Twist Classic transmits the huge dynamic range of the recording with ease and during the final movement as the choir joins the orchestra to sing *Ode To Joy*, the sound is clear while the words are well articulated.

Playing Pink Floyd's *Anisina*, the Twist Classic does a great job of conveying all the atmosphere that this recording generates. This is a well-made and great-sounding cable that helps to make bi-wiring compatible loudspeakers a practical option for a reasonable price. **NR**
