Description

The CA536 is a 1.3 meter USB extension cable with a Type A male connector on one end and a high-retention Type A female connector on the other end. The high-retention connector helps prevent accidental disconnection of a connected USB device.

The CA536 is the replacement extension cable that is included with the [ISO-1](#) USB isolator. If you are looking for the isolator to host cable, see the [CA539](#) cable.
