## Sync DIN Rail Power Supply

5V 15W 1 Phase (NEC Class 2) / DRS-5V30W1NZ

## SபாC

Highlights \& Features

- Ultra compact size
- Full power from $-10^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$ operation
- Universal AC input voltage
- Up to $79.0 \%$ efficiency
- Extreme low temperature cold start at $-40^{\circ} \mathrm{C}$
- NEC Class 2 / Limited Power Source (LPS) certified
- Overvoltage / Overcurrent / Over Temperature Protections
- Certified according to IEC/EN/UL 62368-1

## Safety Standards

#  <br> CB Certified for worldwide use 

| Model Number: | DRS-5V30W1NZ |

## General Description

The ultra-compact and competitively priced Delta Sync DIN rail power supply series is designed for industrial applications requiring highly reliable power supply within a tight space. The Sync series operates with universal AC input range and offers full power up to $55^{\circ} \mathrm{C}$. The output is adjustable from 5.0-5.5 volts, and can support up to 3000 microfarads of load capacitance. A green LED indicates output is present. All models in the series are certified according to IEC/EN/UL 60950-1, IEC/EN/UL 62368-1 Information Technology Equipment (ITE) and UL 508 Industrial Control Equipment (ICE). The series is also fully compliant with RoHS Directive 2011/65/EU for environmental protection. NEC Class 2 and Limited Power Source (LPS) approvals are available for this product.

## Dimensions

L x W x D: $75 \times 21 \times 89.5 \mathrm{~mm}[2.95 \times 0.83 \times 3.52$ inch $]$

## Engineering Data

Output Load De-rating VS Surrounding Air Temperature

Fig. 1 De-rating for Vertical Mounting Orientation
$-10^{\circ} \mathrm{C}$ to $-20^{\circ} \mathrm{C}$ de-rate power by $2 \% /{ }^{\circ} \mathrm{C}$
$>55^{\circ} \mathrm{C}$ de-rate power by $3.33 \% /{ }^{\circ} \mathrm{C}$

## Note

1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1.
2. If the output capacity is not reduced when the surrounding air temperature $>55^{\circ} \mathrm{C}$, the device will run into Over Temperature Protection. When activated, power supply will latch off, until the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition, and require removal/re-application of input AC voltage in order to restart.
3. In order for the device to function in the manner intended, it is also necessary to keep a safety distance of 80 mm ( 3.14 inch ) above and below the device as well as a lateral distance of 25 mm ( 0.98 inch ) to other units while the device is in operation.
4. Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!
5. If the device has to be mounted in any other orientation, please contact info@deltapsu.com for more details.

## Sync DIN Rail Power Supply

## 5V 15W 1 Phase (NEC Class 2) / DRS-5V30W1NZ

Output Load De-rating VS Input Voltage

- No output power de-rating across the entire input voltage range

## Assembly \& Installation

The power supply unit (PSU) can be mounted on 35 mm DIN rails in accordance with EN60715. The device should be installed with input terminal block at the bottom.

Each device is delivered ready to install.

## Mounting

Fig. 2.1 Mounting
Snap on the DIN rail as shown in Fig. 2.1:

1. Tilt the unit slightly upwards and put it onto the DIN rail.
2. Push downwards until stopped.
3. Press against the bottom front side for locking.
4. Shake the unit slightly to ensure that it is secured.

Dismounting

Fig. 2.2 Dismounting
To uninstall, pull or slide down the latch with screw driver as shown in Fig. 2.2. Then slide the power supply unit (PSU) in the opposite direction, release the latch and pull out the power supply unit (PSU) from the rail.

## Sync DIN Rail Power Supply

## 5V 15W 1 Phase (NEC Class 2) / DRS-5V30W1NZ

Safety Instructions

- ALWAYS switch mains of input power OFF before connecting and disconnecting the input voltage to the device. If mains are not turned OFF, there is risk of explosion / severe damage.
- To guarantee sufficient convection cooling, keep a distance of $>40 \mathrm{~mm}$ ( 1.57 inch) above and $>20 \mathrm{~mm}$ ( 0.79 inch ) below the device as well as a lateral distance of $>15 \mathrm{~mm}$ ( 0.59 inch ) to other units including heat source.
- Note that the enclosure of the device can become very hot depending on the surrounding air temperature and output load connected to the device. Risk of burns!
- The main power must be turned off before connecting or disconnecting the wires to the terminals!
- DO NOT insert any objects into the device.
- Dangerous voltages present for at least 5 minutes after disconnecting all sources of power.
- The power supplies unit should be installed in minimum IP54 rated enclosure.
- The power supplies are built in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants.

## Sync DIN Rail Power Supply

5V 15W 1 Phase (NEC Class 2) / DRS-5V30W1NZ

## Functions

- Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

## Start-up Time

The time required for the output voltage to reach $90 \%$ of its final steady state set value, after the input voltage is applied.

## Rise Time

The time required for the output voltage to change from $10 \%$ to $90 \%$ of its final steady state set value.

Hold-up Time
Time between the collapse of the AC input voltage, and the output falling to $95 \%$ of its steady state set value.

## Inrush Current

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

## Dynamic Response

The power supply output voltage will remains within $\pm 5 \%$ of its steady state value, when subjected to a dynamic load from 5\% to $100 \%$ of its rated current.

- $50 \%$ duty cycle / 5 Hz to 1 KHz

## Sync DIN Rail Power Supply

5V 15W 1 Phase (NEC Class 2) / DRS-5V30W1NZ

## Overload \& Overcurrent Protections (Auto-Recovery)

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be activated when output current is 105~140\% of lo (Max load). In such occurrence, the Vo will start to droop and once the power supply has reached its maximum power limit, the protection is activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition of the OLP and OCP is removed and lo is back within the specifications.

It is not recommended to prolong the duration of lo when it is $<105-$ $140 \%$ but $>100 \%$, since it may cause damage to the PSU.

## Short Circuit Protection (Auto-Recovery)

The power supply's output Short Circuit Protection function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode". The power supply will return to normal operation after the short circuit is removed.

## Overvoltage Protection (Latch Mode)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 3 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

The power supply should be latch.

Over Temperature Protection (Latch Mode)
As described in load de-rating section, the power supply also has Over Temperature Protection (OTP). In the event of a higher operating temperature at $100 \%$ load; or, when the operating temperature is beyond what is recommended in the de-rating graph, the OTP circuit will be activated. When activated, power supply will latch off, until the surrounding air temperature drops to its normal operating temperature or the load is reduced as recommended in the de-rating graph. Removal/re-application of input AC voltage will then be required in order to restart.

## External Input Protection Device

The unit is protected with internal fuse (not replaceable) at $L$ pin and it has been tested and approved on 20A (UL) and 16A (IEC) branch circuits without additional protection device. An external protection device is only required if the supplying branch has an ampacity greater than above. Thus, if an external protective device is necessary, or, utilized, a minimum value of 10 A B - or 6A Ccharacteristic breaker should be used.

## Sync DIN Rail Power Supply <br> 5V 15W 1 Phase (NEC Class 2) / DRS-5V30W1NZ

## Others

## Delta RoHS Compliant

## Restriction of the usage of hazardous substances

The European directive 2011/65/EU limits the maximum impurity level of homogeneous materials such as lead, mercury, cadmium, chrome, polybrominated flame retardants PBB and PBDE for the use in electrical and electronic equipment. RoHS is the abbreviation for "Restriction of the use of certain hazardous substances in electrical and electronic equipment".
This product conforms to this standard.

#### Abstract

Attention Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to www.DeItaPSU.com for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.

Delta reserves the right to make changes to the information described in the datasheets without notice.
