

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

MDS-300ADB24

Highlights & Features

- Safety Approvals to IEC 60601-1 3.1rd ed. & IEC 60950-1
- Compliant with IEC 60601-1-2 4th Ed. Requirements
- Up to 210 Watt Convection in 3.5" x 5.5" x 1.75" Package
- Up to 800 K Hrs MTBF
- Suited for Type BF Medical Products.
- 2 x MOPP isolation

Safety Standards

CB Certified for worldwide use

Model Number:	MDS-300ADB24
Unit Weight:	610 g (1.35 lb)
Dimensions (W x L x H):	88.9 x 140.0 x 45.0 mm (3.5 x 5.5 x 1.75 inch)

General Description

Delta's new MDS-300ADB24 enclosed design offers a high energy density (8.8 Watts/in³) 3.5x5.5 inch design for Type BF patient access medical products. With operating parameters of 90 to 264 Vac universal input voltage, temperatures of -10 to +70 degrees centigrade, and altitudes of up to 5000 meters (16,400 feet), the design is well suited for a variety of both medical and non-medical applications. Other features include input surge of 300 Vac, low leakage current, no-load input power < 0.5 Watt, and 800K hour MTBF. This product is certified for EMC standards EN 55011 for industrial, scientific and medical (ISM) radio-frequency equipment, and EN 55032 for Industrial Technology Equipment (ITE) radio-frequency equipment. In addition, only recognized Japanese capacitors are used to ensure long product life.

An enhanced feature set, includes a 5 Volt/0.5 amp standby output, remote on/off, remote sense, and a power good signal that are included as part of the standard product.

The design, which has protection against shock compliant with 2XMOPP and Type BF requirements, has both medical (with risk report available), and ITE safety approvals, including cURus (US & Canada)/TUV/GB (China); plus, CB certificates with all national deviations. Full compliance with RoHS Directive 2011/65/EU for environmental protection is included.

Model Information (All with 5V/0.5A standby available):

Model Number	Input Voltage	Output Voltage	Convection Current Output	Forced Air Current Output
MDS-300ADB24	90-264Vac	24Vdc	0-8.75A	0-12.5A (with 10 CFM forced air)

Model Numbering

MDS	300	A	D	B	24	
Delta Medical Power Supply	Max wattage in the product series. 300 → 300W	Family Code A ~ Z	Product Type D: Enclosed	Input Type Code B: 3pin Class I	Output Voltage 24 for 24V	Revision code, Refer to page 8

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Specifications

Input Ratings / Characteristics

Nominal Input Voltage	100-240Vac
Input Voltage Range	90-264Vac
Nominal Input Frequency	50-60Hz
Input Frequency Range	47-63Hz
Input Current (max)	4A
Input Surge Voltage (max)	300Vac for 100ms
Full load Efficiency (typ.)	93% @ 115Vac/60Hz 94% @ 230Vac/50Hz, Reference Fig.1
Standby Power (max)	0.5W (Inhibit signal high, 24 volt turned off) @ 115Vac/60Hz, 230Vac/50Hz
Inrush Current (max)	40A @ 230Vac, cold start
Input-PE (protective earth) leakage current (max)	0.1mA @ NC ¹⁾ , 0.3mA @ SFC ¹⁾
Output-PE (protective earth) leakage current for Type BF application (max)	0.1mA @ NC ¹⁾ , 0.5mA @ SFC ¹⁾
Power Factor (min)	0.9 @ 115V/50Hz, 230V/50Hz, full load

1) NC: normal condition, SFC: single fault condition

Leakage Current

Input-PE Leakage Current	100Vac/60Hz (Typ)	264Vac/60Hz (Typ)	Delta Limit	IEC60601-1 Limit
Normal Condition	17.5uA	43.5uA	100uA max	5000uA max
Single Fault Condition	32.9uA	90.7uA	300uA max	10000uA max
Output-PE Leakage Current for Type BF application				
Normal Condition	28.5uA	86.7uA	100uA max	100uA max
Single Fault Condition	42.9uA	128.6uA	500uA max	500uA max

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Output Ratings / Characteristics (Main Output)

Nominal Output Voltage (Vrated)	24V
Total Regulation	± 3%
Output Power	300W 10CFM air, up to 210W convection air
Line Regulation (max)	± 0.5%
Load Regulation (max)	± 1%
Ripple & Noise (typ.)	1% pk-pk Vrated @ 300W load, (Refer to Fig. 2 & Fig. 3)
Start-up Time (max)	2000ms @ 115Vac
Hold-up Time (min)	10ms @ 100Vac and 115Vac, with 300W load 20ms @ 100Vac and 115Vac, with 190W load
Dynamic Response (Overshoot & Undershoot O/P Voltage)	± 5% @ with 50-100% load change
Capacitive load (max)	1500uF
Rise time (max)	100ms
Remote Sense	Up to 500mV compensation for voltage drop across external wire connections to load. Short and reverse connection protected.

(a) 115V (measured value=106mV)

(b) 230V(measured value=104mV)

Mechanical

Case Cover	Enclosed cover (SPCC)
Dimensions (W x L x H)	88.9x140.0x45.0mm (3.5x5.5x1.75 inch)
Unit Weight	610g (1.34lb)

Environment

Surrounding Air Temperature	Operating	Absolute Maximum/Minimum Rating. -10°C to +70°C. Linearly derate from 100% load at 50°C, to 50% load at 70°C (2.5%/ degree centigrade) Note: see power de-rating curves below
	Storage	-40°C to +85°C
Operating Humidity		5-95% RH (Non-Condensing)
Operating Altitude		5,000 meters (16,400 feet or 50kPa)
Non-operating Altitude		5,000 meters (16,400 feet or 50kPa)
Shock Test (Non-Operating)		50G, 11ms, 3 shocks for each direction
Vibration (Operating)		5-500Hz, 2Grms, 15 minute for each three axis

Power De-rating curves

Load De-rating Fixture and Test Setup. Fan is DELTA Part Number AFB0512HHD.

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Protections (for both 24 Volt and 5Volt Standby outputs, unless otherwise indicated)

Overvoltage (max)	Main output 125% of rated voltage, Latch Mode Standby Output 125% of rated voltage, Latch Mode
Over load / Over current (max)	Main output 160% of rated current Standby Output 1.06A max Hiccup Mode(Non-Latching, Auto-Recovery)
Over Temperature	Latch Mode for main output
Short Circuit	Hiccup Mode, (Non-Latching, Auto-Recovery)

Reliability Data

MTBF(Minimum) at 115Vac, 210W, 35 °C	Convection Air Flow	800 Khrs based on Telecordia SR-332
Operating life(Minimum) at 115Vac, 210W, 25°C	Convection Air Flow	26,280 hrs

Safety Standards / Directives

1) Criteria A: Normal performance within the specification limits

2) Criteria B: Output out of regulation, or shuts down during test. Automatically restore to normal operation after test.

3) Asymmetrical: Common mode (Line to earth)

4) Symmetrical: Differential mode (Line to line)

5) Unless otherwise noted, requirements apply at 300 watt output load

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Dimensions

Mechanical Drawing

Notes

- Dimensions are in mm(inches)
- There are two locations where assembled power supply is connected to the customer's product
 - a. Bottom mounting, use (4X) M3 screws to affix assembled power supply to product's enclosure. Extruded hole with thread must be withstand 9Kgf.cm (7.81lb-in) min. Maximum allowed screw penetration is 3.5mm (0.138 inch).
 - b. Side mounting, use (2X) M3 screws to affix one side of assembled power supply to the product's enclosure. Extruded hole with thread must be withstand 9Kgf.cm (7.81lb-in) min. Maximum allowed screw penetration is 3.5mm (0.138 inch).

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

- CN1 mates with Molex housing 26-03-4030 and Molex series 6838 crimp terminals. Input Line can also be connected to Input Neutral, and Input Neutral can be connected to Input Line.
- CN102 & CN103(Output Connector): Cross recessed pan head screws M3X0.5x10, with spring washers and flat washers, force required to tighten the screws is 7~8kgf.cm(6.1~7.0inch-lb)
- CN2: PINGOOD JP-13T mates with KST: FDFNYD1-187 or other applicable connectors.
- CN101 mates with Molex housing 1041421000 and Molex series 104539-8002 crimp terminals.

Control and STANDBY connector CN101	
Pin 1	Remote sense +
Pin 2	Remote sense –
Pin 3	Power Good +
Pin 4	Power Good -(DC RTN)
Pin 5	Remote ON_OFF/INHIBIT +
Pin 6	Remote ON_OFF/INHIBIT -(DC RTN)
Pin 7	5V Standby
Pin 8	DC RTN
Pin 9	5V Standby
Pin 10	DC RTN

- System protective earth connection can be connected to the enclosed cover or to CN2.

MDS-300ADB24 □□	
<u>AA</u>	Delta Standard
<u>AB</u>	A mating connector with Molex housing 1041421000 and Molex terminals 1045398002, with jumper wire between pins 5 and 6, will be inserted into CN101. This will allow the power supply to turn on, without user intervention, upon the application of input AC voltage Due to presence of mating connector, external connections cannot be made to pins 1-10 of CN101.

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Functions

Start-up Time

The time required for the output voltage to reach 90% of its final steady state value, after the input voltage is applied.

Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 90% of its steady state value.

■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Dynamic Response (24 Volt Output)

The power supply output voltage will remain within $\pm 5\%$ of its steady state value, when subjected to a dynamic load 50 to 100% of its rated current.

■ 50 to 100% Load

Inrush Current

Inrush current is the input current that occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

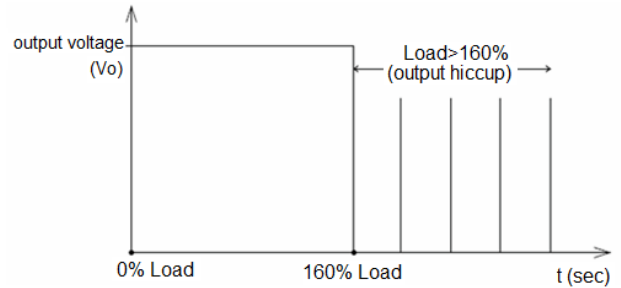

Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 5 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

Overload & Over current Protections

The power supply's Overload (OLP) and Over current (OCP) Protections will be activated before the 24 volt outputs' current exceeds 160% of I_o (Max load). Upon such an occurrence, V_o will start to drop. Once the power supply has reached its maximum power limit, the protection will be activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition causing the OLP and OCP is removed and I_o is back within the specified limit. For the standby output, the performance is the same, with the exception that the protection will be activated before the output current exceeds 1.06 amps.

Additionally, if the 24 Volts' out is $>100\%$; but $<160\%$ for a prolonged period of time (depending on the load), the Over Temperature Protection (OTP) will be activated due to high temperature on critical components. The power supply will then go into latch mode.

Short Circuit Protection

The power supply's output OLP/OCP function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCP section on this page. The power supply will return to normal operation after the short circuit is removed.

Over Temperature Protection

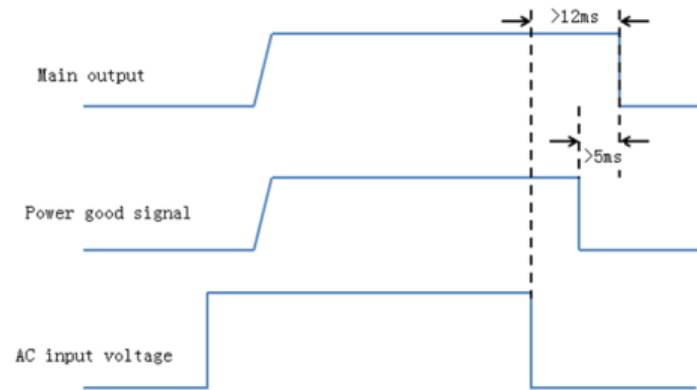

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but $>100\%$ load. In the event of a higher operating temperature condition at 100% load, the power supply will run into OTP when the surrounding air temperature is higher than the operating temperature. When activated, the output voltage will go into latch mode until the input voltage is removed; then, reapplied, and the surrounding air temperature drops to its normal operating temperature.

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Power Good

Power Good+ pin is an open collector transistor (40V/600mA rating). A resistor (suggested value 10Kohm, 1/8W) can be added between 5V STANDBY pin (or, other available pull-up voltage that is no greater than 30V) and the Power Good+ pin (refer to figure below). Value of pull-up resistor may have to be adjusted, depending on voltage used, and other end-use conditions of the Power Good+ pin connection to the product. When AC input is on, Power Good+ pin will be high. When AC input is off, Power Good+ pin will be low. There will be a minimum of 5 milliseconds (at 210W load) between the time the power good goes to low level, and the time when the output reaches 90% of its rated value.

Remote On_Off/ INHIBIT

Remote ON_OFF/ INHIBIT can be used to enable or disable only the main output. When the main output is disabled, the +5V Standby output will continue to operate. This signal can be pulled down to a low level of 0.3 volts, or shorted to DC-Return, in order for the main output to be enabled; and, floated (no connection to the signal), or pulled up to a value greater than or equal to 3 volts, in order to disable the main output.

Remote Sense

Remote sense feature can be used to compensate for the extra voltage drop on output wires that are connected from the main output terminals, to the load. With wires connected from the remote sense pins, at the same locations as the wires from the main output, the remote sense function can compensate up to 500mV voltage drop. The power supply will not be damaged if the remote sense pins are shorted, or if a reverse/inverted polarity connection is made to the load.

Medical AC-DC Enclosed Power Supply

24V 300W with 5V/0.5A Standby / MDS-300ADB24

Certificate

All Delta Medical Power products conform to the European directive 2011/65/EU. RoHS is the abbreviation for "Restriction of the use of certain hazardous substances"

Delta has been certified as meeting the requirement of ISO 13485: 2003 and EN ISO 13485:2012 for the design and manufacture of switching power supply and adaptor for medical device.

In addition to a UL Total Certification Program (TCP) approved client laboratory for IEC60950 and IEC60065. Delta also has participated UL Client Test Data Program (CDTP) for IEC 60601

Attention

Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to www.DeltaPSU.com for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.

Delta reserves the right to make changes to the information described in the datasheets without notice.
