THE BETTER CHOICE. SINCE 1948.
German quality sprayers and cut-off machines

Product Information Granulate Spreader 421

For the spreading of granular materials by private and professional operators.

The unit is carried in front of the body. This allows more convenient and controlled spreading over less accessible and steep terrain.

The exceptional level of distribution of the spread material matches the high level of large spreaders in the agricultural industry.

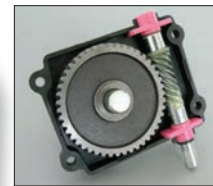

The portable fertilizer spreader SOLO 421 can be used throughout the year, i.e. for the application of fertilizers, seeds, snail pellets and for gritting salt in winter.

Area performance of approx. 5.000 m² per hour

SOLO PRO LINE

Operational benefits

- **The container** is moulded from highly resistant polyethylene with ergonomic shape for carrying the unit on the front of the body. **The container lid** is easily tightened and removed with a quarter turn of the lid.
- A very **large filling aperture** with a 145mm diameter facilitates filling and cleaning.
- The **9 litre container volume** supports rapid work progress. The container is corrosion free and is easy to clean.
- **The base is made of impact resistant plastic material** and allows safe positioning on the ground. The ergonomically shaped back provides a high degree of carrying comfort.
- The **comfortable carrying strap** incorporates a rubberised shoulder slide and metal connectors.
- A **tough worm drive** with metal gears is sealed in a strong gear housing – corrosion and maintenance free. The robust and long-life worm gear shaft and the worm wheel are made of metal.
- The **direction of throw and the output volume** are adjustable.
- An **integrated agitator** in the container constantly keeps the granulate material in motion. This prevents blockages and guarantees uniformity of the spread.

Sealed worm drive with metal gears

Adjustable direction of throw (1), agitator (2)

Safe footing and ergonomically shaped

Comfort - carrying strap

Model	421
Order number	4000121
Container fill volume litres	9
Container filler opening Diameter cm	14,5
Weight empty kg	2,5
Dimensions without crank WxDxH, cm	28 x 26 x 48
Vertical width of spread depending on type of spread material, cm	Granulate ca. 300 - 400 Lawn seed ca. 180 - 200
Horizontal width of spread depending on type of spread material, cm	Granulate ca. 180 - 200 Lawn seed ca. 150 - 170
Gear drive	fully sealed worm drive with metal gears
Gear drive	1 : 7,5
